I. INTRODUCTION

A. RISK FACTORS

i. STANDARD RISK FACTORS:

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal;
- As the price/value/interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down;
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme;
- The name of the Scheme does not in any manner indicate either the quality of the scheme or its future prospects and returns;
- Save as otherwise provided in the Regulations, the Sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs.100,000/- made by it towards setting up the Fund;
- The present Scheme is not guaranteed or assured return schemes.

ii. SCHEME SPECIFIC RISK FACTORS

Some of the Scheme specific risk factors include, but not limited, to the following:-

- 1. Passively Managed Portfolio:** As the scheme proposes to invest not less than 95% of the net assets in the securities of the underlying Index, the scheme will not be actively managed. As PGIM India CRISIL IBX Gilt Index – Apr 2028 Fund is not actively managed, the scheme invests in the securities included in its underlying index regardless of their investment merit. The underlying investments may be affected by a general decline in the Indian markets relating to its Underlying Index and the AMC does not attempt to take defensive positions during such declining markets. Further, the fund manager does not make any judgment about the investment merit nor shall attempt to apply any economic, financial or market analysis.
- 2.** The liquidity of the Scheme's investments may be inherently restricted by trading volumes, settlement periods and transfer procedures. In the event of an inordinately large number of redemption requests, or of a re-structuring of the Scheme's investment portfolio, these periods may become significant.
- 3. Tracking error risk**

Tracking error is defined as the annualized standard deviation of the difference in daily returns between the NAV of the Scheme and the Underlying Index. Theoretically, the corpus of the Scheme has to be fully invested in the securities comprising the Underlying Index in the same proportion of weights as the securities have in the Underlying Index. However, deviations from the stated index replication may occur due to reason that the Scheme has to incur expenses, corporate actions pertaining to the Index including changes to the constituents, regulatory policies, ability of the Fund Manager to replicate the Underlying Index, delay in purchase or non-availability of underlying securities forming part of the index etc. The AMC would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the extent possible. There can be no assurance or guarantee that the Scheme will achieve any particular level of tracking error relative to performance of the Index.

It will be the endeavor of the fund manager to keep the tracking error as low as possible. Under normal circumstances, such tracking error is not expected to exceed 2%. However, in certain events like market volatility during rebalancing of the portfolio following the rebalancing of the underlying index, etc. or in abnormal market circumstances, the tracking error may exceed

the above limits. In case of unavoidable circumstances in the nature of force majeure, which are beyond the control of the AMC's, the tracking error may exceed 2% and the same shall be brought to the notice of Trustees with corrective actions taken by the AMC, if any.

4. Tracking Difference Risk

The Fund Manager may not be able to invest the entire corpus exactly in the same proportion as in the underlying index due to certain factors such as the fees and expenses of the scheme, corporate actions, cash balance, changes to the underlying index and regulatory policies which may affect AMC's ability to achieve close correlation with the underlying index of the scheme. The scheme's returns may therefore deviate from those of its underlying index. Tracking Difference is the Difference of daily returns between the Scheme and the Benchmark Index annualized over 1 year, 3 Year, 5 Year, 10 year and Scheme Since Inception period. It will be the endeavor of the fund manager to keep the tracking difference as low as possible. The Fund must maintain an annualized Tracking Difference averaged over one year period of not more than 1.25%. If the tracking difference averaged over one year period is higher than 1.25%, the same shall be brought to the notice of trustees with corrective actions taken by the AMC, if any. Tracking difference will be disclosed on a monthly basis on www.pgimindiamf.com and AMFI website.

5. Risk Factors Associated with Fixed Income and Money Market Instruments

- a) The Scheme may invest in debt and debt related instruments, as may be permitted by SEBI, from time to time. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities' purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. The length of time for settlement may affect the Scheme in the event the Scheme has to meet an exceptionally large number of redemption requests. The Scheme will retain certain investments in cash or cash equivalents for its day-to-day liquidity requirements.
- b) A fundamental risk relating to all fixed income securities is a chance that an issuer will fail to make a principal and interest payment when due (credit risk). Issuers with higher credit risks typically offer higher yields for this added risk. Conversely, issuers with lower credit risk offer lower credit yields. Generally government securities are considered to be the safest in terms of the credit risk. Changes in financial conditions of an issuer, changes in economic and political conditions in general, or changes in economic or and political conditions specific to an issuer, all of which are factors that may have an adverse impact on a firms credit quality and security values.
- c) All fixed income securities are also affected by changes in interest rates (interest rate risk). The prices of debt securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than the short-term securities. The Debt markets can be volatile leading to the possibility of up or down movements in prices of fixed income securities and thus the possible movements in the NAV.
- d) Debt securities may also be subject to price volatility due to factors such as market perception of the issuer and general market liquidity conditions (market risk).
- e) Lower rated or unrated securities are more likely to react to developments affecting the credit market than highly rated securities, which react primarily to movements in the general level of interest rates. Lower rated securities also tend to be more sensitive to economic conditions than higher rated securities..
- f) The corporate debt market is relatively illiquid vis-à-vis the government securities market. Even though the government securities market is more liquid compared to that of other debt instruments, on occasions, there could be difficulties in transacting in the market due to extreme

volatility or unusual constriction in market volumes or on occasions when an unusually large transaction has to be put through.

- g) Zero coupon or deep discount bonds are debt obligations that do not entitle the holder to any periodic payment of interest prior to maturity or a specified date when the securities begin paying current interest and therefore, are generally issued and traded at a discount to their face values. The discount depends on the time remaining until maturity or the date when securities begin paying current interest. It also varies depending on the prevailing interest rates, liquidity of the security and the perceived credit risk of the Issuer. The market prices of zero coupon securities are generally more volatile than the market prices of securities that pay interest periodically and are likely to respond to changes in interest rates to a greater degree than other coupon bearing securities having similar maturities and credit quality.
- h) Apart from normal credit risk, zero coupon bonds carry an additional risk, unlike bonds that pay interest throughout the period to maturity, zero coupon instruments/deferred interest bonds typically would not realise any cash until maturity or till the time interest payment on the bonds commences. If the issuer defaults, the Scheme may not obtain any return on its investment.
- i) The Scheme may invest in securities which are not quoted on a stock exchange (“unlisted securities”) which in general are subject to greater price fluctuations, less liquidity and greater risk than those which are traded in the open market. Unlisted securities may lack a liquid secondary market, and there can be no assurance that the Scheme will realise its investments in unlisted securities at a fair market value, if sold in the secondary market
- j) There have been times in the past, when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct further transactions. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are not invested and no return is earned thereon.
- k) Prepayment Risk: Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.
- l) Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the Plans are reinvested. The additional income from reinvestment is the “interest on interest” component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- m) Settlement Risk: The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. By the same rationale, the inability to sell securities held in the Scheme’s portfolio due to the extraneous factors that may impact liquidity would result at times, in potential losses to the Scheme, in case of a subsequent decline in the value of securities held in the Scheme’s portfolio.
- n) Regulatory Risk: Changes in government policy in general and changes in tax benefits applicable to Mutual Funds may impact the returns to investors in the Scheme.
- o) The value of the Scheme’s investments may be affected generally by factors affecting capital markets, such as interest rates, currency exchange rates, foreign investment, changes in government policy, taxation and political, economic or other developments. Consequently, the net asset value of the Scheme may fluctuate and the value of the Scheme’s Units may go down or up. Past performance of the Sponsor is not necessarily indicative of future performance of the Scheme.
- p) Money Market instruments are instruments that are generally have maturity of less than one year. The NAV of the Scheme’s Units, will be affected by the changes in the level of interest rates.
- q) Investments in money market instruments and debt instruments involve credit risk commensurate with short term rating of the issuers.

6. Risks associated with investing in Government of India Securities:

There is liquidity risk with fixed rate Government of India Securities even though the Government of India Securities market is more liquid compared to other debt instruments, on

certain occasions, there could be difficulties in transacting in the market due to extreme volatility leading to constriction in market volumes. While Government of India Securities generally carry relatively minimal credit risk since they are issued by the Government of India, they do carry price risk depending upon the general level of interest rates prevailing from time to time. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates decline, the prices of fixed income securities increase. The extent of fall or rise in the prices is a function of the coupon rate, days to maturity and the increase or decrease in the level of interest rates. The price-risk is not unique to Government of India Securities. It exists for all fixed income securities. Therefore, their prices tend to be influenced more by movement in interest rates in the financial system than by changes in the government's credit rating. By contrast, in the case of corporate or institutional fixed income Securities, such as bonds or debentures, prices are influenced by their respective credit standing as well as the general level of interest rates.

7. Risks associated with segregated portfolio

- Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer.
- Security comprising of segregated portfolio may not realise any value
- Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV

8. Risks associated with investing in Tri-Party Repo through CCIL (TREPS)

The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. CCIL maintains prefunded resources in all the clearing segments to cover potential losses arising from the default member. In the event of a clearing member failing to honour his settlement obligations, the default Fund is utilized to complete the settlement. The sequence in which the above resources are used is known as the "Default Waterfall". As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members. Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

9. Risks factors associated with processing of transaction through Stock Exchange Mechanism:

The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognised stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing/settlement, etc. upon which the Fund has no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s).

10. Risk on Right to limit redemption:

Subject to the approval of Board of Directors of the AMC and Trustee Company and immediate intimation to SEBI, a restriction on redemptions may be imposed by the Scheme under certain exceptional circumstances, which the AMC / Trustee believe that may lead to a systemic crisis or event that constrict liquidity of most securities or the efficient functioning of markets. Please refer to the paragraph “Right to Limit Redemptions” for further details.

Risk Mitigation Measures by AMC: The Fund by utilizing a holistic risk management strategy will endeavor to manage risks associated with investing in debt markets. The risk control process involves identifying & measuring the risk through various risk measurement tools.

The Fund has identified following risks of investing in debt and designed risk management strategies, which are embedded in the investment process to manage such risks.

Nature of Risk	Risk Mitigation Measures by AMC
For making investment in fixed income and money markets	
Liquidity Risk: The debt market is relatively illiquid although the government securities market is more liquid compared to that of other debt instruments, on occasions, there could be difficulties in transacting in the market due to extreme volatility or unusual constriction in market volumes or on occasions when an unusually large transaction has to be put through.	Securities in the underlying index are selected by applying liquidity as one of the criteria’s and hence the portfolio is expected to be reasonably liquid.
Settlement Risk: Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are not invested and no return is earned thereon.	The AMC has well laid out processes and systems, which mitigate operational risks attached with the settlement process.
Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the Plans are reinvested. The additional income from reinvestment is the “interest on interest” component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.	Reinvestment risk will be managed as per the criteria’s laid out in the underlying index with respect to maturity of the securities forming part of the underlying index and as permitted by the regulations.

Risk Management and Liquidity Management tools:

Liquidity Risk Management of Open ended Debt Schemes is managed using various tools which can be identified as Stress Testing, Liquidity Risk considering Investor behaviour and Asset Liability Mismatch Stress tests (using methods provided by AMFI) monitor the Annualised impact on NAV while considering rise in yields for a given credit rating, type of security, etc, in respective matrices for the relevant duration bucket whereas the investor behaviour and redemption trends are monitored in accordance with the percentage of liquid assets in a portfolio while monitoring the Asset Liability mismatch.

An indicative list of liquidity management tools is as under:

Liquidity Management Tool	Brief Description
---------------------------	-------------------

Potential Risk Matrix	As provided in paragraph 17.5 of SEBI Master Circular dated May 19, 2023 on Potential Risk Class Matrix (PRC) for debt schemes and various other circulars issued thereon, the scheme shall maintain its portfolio in line with the defined PRC position i.e maximum risk that a scheme will run as per design and a measurement of that risk on a regular basis in case of any breaches, remedial actions shall be in line with the requirement of the aforesaid circular.
Risk -o- meter	As provided in paragraph 17.4 of SEBI Master Circular dated May 19, 2023 on Product Labelling in mutual Fund schemes, Risk-o-meter and various other circulars issue thereon, the scheme shall calculate and disclose the current risk level based on its portfolio construct.

Position of Debt Market in India

The Indian debt market, one of the largest in Asia, is developing rapidly buoyed by a multitude of factors including new instruments, increased liquidity, deregulation of interest rates and improved settlement systems. The major players in the Indian debt markets today are banks, financial institutions, insurance companies, pension funds, provident funds and mutual funds. The instruments in the market can be broadly categorized as those issued by corporates, banks, financial institutions and those issued by state/central governments. The risks associated with any investments are - credit risk, interest rate risk and liquidity risk. While corporate papers carry credit risk due to changing business conditions, government securities carry zero credit risk. Interest rate risk is present in all debt securities and depends on a variety of macroeconomic factors. The largest segment of the Indian Debt market consists of the Government of India securities where the daily average trading volume is in excess of Rs. 5000 crores, with instrument tenors ranging from short dated Treasury Bills to

long dated securities extending up to 30 years. The Corporate bond market, though relatively less liquid, is also fast developing with an increased participation from the banks, Financial Institutions, mutual funds, provident funds, insurance companies and corporate treasuries. Also there are a large number of instruments available like MIBOR linked bonds, commercial papers and medium to long dated fixed and floating rate bonds. The yield curve usually tends to be positive sloping i.e. yield of shorter dated securities being lower than that of longer dated ones.

The money markets in India essentially consist of call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at specified price), Tri-Party Repo, commercial papers (CPs, short term unsecured promissory note, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI). A predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates.

The various instruments currently available for investments are:

G. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

The Benchmark for the Scheme is CRISIL-IBX Gilt Index - April 2028.

The CRISIL-IBX Gilt Index - April 2028 seeks to measure the performance of portfolio predominantly invested in G-Sec maturing between 06 September 2027 and 05 April 2028. The index shall mature on 05 April 2028.

Features

- Total Return Index seeking to capture price and coupon returns of the underlying portfolio.
- It's a target date index which follows a roll-down approach.
- The index uses a buy and hold strategy wherein the portfolio of G-sec is held till maturity unless they become ineligible
- Small portion of portfolio (2%) is invested in on-the-run 91 Day T-bill for liquidity
- Index portfolio marked-to-market on a daily basis using CRISIL Gilt and T-Bills valuations
- Inception Date of Index: 28 February 2021.

Key Characteristics

- Replicability: The index constituents are valued on a daily basis. This lends the index a realistic approach by having the valuations close to the market levels

Methodology

- Weights of the G-sec securities and T-bills Securities in the Index will be 98% and 2% respectively.
- Securities Selection methodology in G-Sec are as follows:
 - All securities selected will have a maturity date in the eligible period of G-sec which is from 06 September 2027 to 05 April 2028.
 - All Securities are selected on the basis of Amount Outstanding.
 - Minimum Amount Outstanding should be Rs. 25000 crores.
 - Weights to individual securities will be calculated in the ratio of amount outstanding (30% weightage) and liquidity score (70% weightage).
 - Liquidity score will be calculated based on the volume traded (70%), number of trades (15%) and days traded (15%) in the previous quarter.
 - Eligible securities will be added on a 6 monthly basis and weights will be redistributed based on ratio of amount outstanding (30% weightage) and liquidity score (70% weightage).
- Securities Selection methodology in T-Bills are as follows:
 - Three 91-Day T-Bill will be selected by rebalancing on a bimonthly basis.
 - This will consist of last three on-the-run 91-Day T-Bills as on the bi-monthly (once in two months) rebalancing date.
 - The maturity date of such T-bill selected should not be greater than the maturity of the fund.
 - In case no such 91 Day on-the-run T-Bill is available closer to the maturity date of the fund, T-Bill that is closest to the maturity date but maturing before the maturity date of index will be selected.
 - If such T-Bill matures as well, the proceeds will be invested in TREPS.
 - The T-bills will be weighted equally on each rebalancing date.
- As the index includes securities that shall mature during the last 6 months period ending on the final maturity date of the index, any proceeds from the redemption of securities prior to the final maturity date of the index shall be reinvested according to following waterfall approach –
 - a) The proceeds from security redemption will be reinvested in the longest maturity outstanding government security issued and maturing on or just before the index maturity date.
 - b) In case a replacement in the form of another outstanding government security cannot be found for reinvestment then the proceeds from such redemption shall be reinvested in the remaining portfolio on the same date in the proportion of the existing weights.
 - c) In case due to any reason, it is not possible to meet the requirements stated in point (a) and (b) above, then the proceeds from such redemption shall be reinvested in a T-Bill maturing on or just before the index maturity date.

- d) If the last outstanding security (including T-Bill) in the index matures before the final index maturity date, all redemption proceeds shall be assumed to be re-invested in The Clearing Corporation of India Ltd.'s (CCIL) TREPS overnight rate for any subsequent days till the maturity of the index.
- The relative weights of the Government securities and asset classes will change due to price movement and will be reset during the 6 monthly rebalancing.
 - While rebalancing (security addition/ deletion/ weights reset), Impact Cost for each asset class will be as follows:
 - G-sec: 1.5 bps on each leg (total 3 bps)
 - T-bills: 0 bps on each leg (total 0 bps)

4. COMPUTATION OF NAV

NAV of Units under the Scheme will be calculated by following method:

$$\text{NAV (Rs.)} = \frac{\text{Market or Fair Value of Scheme's investments} + \text{Current Assets} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under the Scheme}}$$

The NAV shall be calculated up to two decimal places. However the AMC reserves the right to declare the NAVs up to additional decimal places as it deems appropriate. Separate NAV will be calculated and disclosed for each Plan/Option. The AMC will calculate and disclose the NAV of the Scheme on all the Business Days.

The numerical illustration of the above method is provided below

Market or Fair Value of Scheme's investment (Rs.) = 1,15,12,05,600.00

Current Assets (Rs.) = 60,00,000.00

Current Liabilities (Rs.) = 40,00,000.00

No of units Outstanding under the scheme = 10,00,00,000

$$\text{NAV Per Unit (Rs.)} = \frac{115,12,05,600 + 60,00,000 - 40,00,000}{10,00,00,000} = 11.5321$$

The aforesaid provision pertaining to " Calculation of NAV" shall apply in respect of each individual scheme and / or plan as the case may be. The NAV per unit above is rounded off to four decimals

The NAV will be calculated as of the close of every Business Day.

The Trustees reserve the right to change the source for determining the exchange rate at a future date after recording the reason for such change.
