Equity Market

The market that was

After two months of weakness, Indian Equities recovered smartly in April 2018 with the Nifty up 6.2% in the month. IT continued to see outperformance on the back of rupee depreciation and disappointing CAD data even as earnings trends were mixed. Banks had a better month supported by decent earnings even as one of the large private sector banks reported a big cleanup quarter. On the other hand, Oil and Gas and Telecom sectors were subdued.

On the economy front, CPI inflation eased for the third consecutive month to 4.3% in Mar from 4.4% in Feb. India's Industrial Production data for the month of Feb (released in April) stayed buoyant at 7.1%. Mar trade deficit widened to \$13.7bn from \$12bn last month as exports slipped into YoY contraction. RBI left the policy rates unchanged in the April policy and the voting pattern (5-1) was also similar to the February policy. With core inflation at 4 year high of 5.4%, RBI's stance in the next meeting would be keenly watched.

Capital market activity was relatively muted in Apr with 14 deals totalling ~\$650mn during the month. FII's were net sellers in Indian equities in Apr with \$978mn of equity outflows during the month which took their YTD buying total to \$1.1bn. DIIs meanwhile saw \$1.3bn of net buying – YTD DIIs have now bought \$5.1bn worth. Mutual Funds contributed \$1.4bn to the net buying even as Insurers net sold \$145mn during the month.

Going Forward

Some of the lead indicators such as auto/CV sales are showing signs of pickup and earnings season (though in its infancy) has seen a decent pickup (led by some of the large caps). GST collections also have shown buoyancy in the month of April, but how much is due to seasonal impact of March will only be known in subsequent months. Introduction of e-way bill should provide more teeth to the GST regime and improve efficiency of the same going forward

Outcome of Karnataka state elections and MSCI rebalancing will be keenly monitored by investors this month. Political stability would be a key barometer which would impact market sentiment and valuations going forward and with a slew of state elections schedule in the next 12 months along with the general elections, apart from earnings, would also provide direction to the market.

Last 18 months have seen a confluence of measures on economy and policy front which have had an impact all around. The economy seems to be stabilizing from these. The macro headwinds in the form of rising deficits, crude, core inflation, yields and (hence) currency are getting more pronounced. At the same time, the micro numbers in terms of corporate profitability is getting better compared to recent history. Overall outlook for Indian equities looks bright, short term volatility notwithstanding.

Macro Review

Inflation for the month of March came in lower at 4.28%, which was slightly higher than market expectations of 4.10% though the stickiness in the core inflation number was worrisome. This CPI number was probably the lowest for H1 of CY2018 and Inflation is likely to rise from here onwards before peaking around 5.70% in July 2018.

The trade deficit for the month of March widened to USD 13.70 bn as compared to a deficit of USD 12 bn in February. The trade deficit number was worse than market expectation of USD 12.3 bn. The higher trade deficit was due to a faster pick-up in imports relative to exports.

On year on year basis, exports declined by 0.7% in March, which is partly due to base effects and imports registered a growth of 7.1% during the month of March 2018.

For FY18, exports grew by 9.8% and imports grew by 19.6%, resulting in a trade deficit of USD 156.8 bn vs. USD 108.5 bn in FY17.

The current account deficit is expected to widen to 2.50% in FY19 from 2.00% in FY18. Portfolio flows are also expected to moderate this year and coupled with the widening trade deficit, the overall BOP surplus is expected to shrink.

Crude prices rose by 8.50% during the month as US Inventories fell and market started to price in the risk to the US – Iran accord.

Liquidity and Rates

Liquidity was comfortable at the start of the month but tightened towards end of the month as currency in circulation rose. Overall liquidity is expected to become tight going ahead as portfolio outflows continue and current account deficit widens.

INR depreciated during the month with RBI refraining from any big intervention during the course of the month, INR depreciating by 2.3% last month. We continue to expect a depreciation bias against INR on a widening current account deficit and also some incremental worsening in macroeconomic variables.

The Bond markets witnessed a turbulent month with the month starting on a positive note as RBI lowered the Inflation target for H2 of FY 19 leading to a rally in the bond markets with the 10yr benchmark touching a low of 7.13% on the policy day. The optimism was subsequently tampered with the SDL supply being higher than expected leaving the total SLR supply for Q1 of FY 19 higher by almost 10%. The 10yr bond yield retraced to 7.77% as RBI Policy minutes were much more hawkish with majority of the members expressing concern on potential upsides to Inflation. Crude also rallied and with the continued muted participation of PSU Banks the market had no cover. The hawkish minutes led to flattening of the curve as the markets started to price in rate hikes by RBI. The flatness in the curve is likely to persist as there are worries about liquidity tightness and further rise in crude prices ahead.

The bond market, at the current yields, is factoring in 50 bps rate hike by the end of the year and we believe that at this juncture the behaviour of crude prices and GST collections will determine the trajectory of the yield curve.

We continue to expect RBI to retain their Neutral Stance even if they were to hike rates on higher than expected Inflation.

Recommended Products

Taking into account the end of the rate easing cycle and rising global headwinds in the form of higher yields and commodity prices, we continue to recommend short duration products in the average maturity range of 1-3 years. These products will limit the return volatility for investors at a time when the yield environment is inching higher. The rise in yields over the last six months have also given an attractive entry point to investors from a medium term perspective. We recommend the DHFL Pramerica Short Maturity Fund in this category.

The other category that we wish to recommend is the 'accrual category' which is positioned well given the higher Yield (carry) in this segment and limited exposure to duration. We recommend the DHFL Pramerica Credit Risk Fund in this space.

We also recommend the DHFL Pramerica Dynamic Bond Fund as a tactical Investment for those investors with a slightly higher appetite to handle volatility.

@@ Total Expense Ratio is weighted average for the month. Ratio excludes Goods and Services Tax on management fees.

ICRA has assigned the "[ICRA] AAAMfS" (pronounced as ICRA triple A m f s) rating to the DHFL Pramerica Insta Cash Fund, DHFL Pramerica Ultra Short Term Fund, DHFL Pramerica Floating Rate Fund, DHFL Pramerica Banking and PSU Debt Fund, DHFL Pramerica Dynamic Bond Fund, DHFL Pramerica Medium Term Fund and DHFL Pramerica Premier Bond Fund. Schemes with this rating are considered to have the highest degree of safety regarding timely receipt of payments from the investments that they have made. ICRA has assigned the "[ICRA] AA+mfs" (pronounced as ICRA double A plus m f s) rating to the DHFL Pramerica Short Maturity Fund. Schemes with this rating are considered to have the high degree of safety regarding timely receipt of payments from the investments that they have made.

The ratings should, however, not be construed as an indication of the performance of the Mutual Fund scheme or of volatility in its returns. For complete rating scale and definitions please refer to ICRA's Website www.icra.in or other ICRA Rating Publications ICRA Credit Quality Rating Methodology for debt mutual fund schemes.

ICRA's mutual fund rating methodology is based on evaluating the inherent credit quality of the fund's portfolio. As a measure of the credit quality of a debt fund's assets, ICRA uses the concept of "credit scores".

These scores are based on ICRA's estimates of credit risk associated with each exposure of the portfolio taking into account its maturity. To quantify the credit risk scores, ICRA uses its database of historical default rates for various rating categories for various maturity buckets. The credit risk ratings incorporate ICRA's assessment of a debt fund's published investment objectives and policies, its management characteristics, and the creditworthiness of its investment portfolio. ICRA reviews relevant fund information on an ongoing basis to support its published rating opinions. If the portfolio credit score meets the benchmark of the assigned rating during the review, the rating is retained. In an event that the benchmark credit score is breached, ICRA gives a month's time to the debt fund manager to bring the portfolio credit score within the benchmark credit score. If the debt fund manager is able to reduce the portfolio credit score within the benchmark credit score, the rating is retained. If the portfolio still continues to breach the benchmark credit score, the rating is revised to reflect the change in credit quality.

[^]Benchmark. NA - Not Available. The above performance is for Regular Plan - Growth Option. Different plans have a different expense structure. Past performance may or may not be sustained in future and should not be used as a basis for comparison with other investments.

How to read the Factsheet

Fund Manager:

An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Application Amount for Fresh Subscription:

This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount:

This is the minimum investment amount for an existing investor in a mutual fund scheme.

Yield to Maturity:

The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

SIP:

SIP or systematic investment plan works on the principle of making periodic investment of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs. 500 every 15th of the month in an equity fund for a period of three years.

NAV:

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Benchmark:

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10- year Gsec.

Entry Load:

A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent.

Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs. 100 and the entry load is 1%, the investor will enter the fund at Rs. 101.

Note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.

Exit load:

Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is Rs. 100 and the exit load is 1%, the redemption price would be Rs. 99 per unit.

Modified Duration:

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Standard Deviation:

Standard Deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Sharpe Ratio:

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta:

Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

AUM:

AUM or assets under management refers to the recent/ updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings:

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/ securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme:

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile:

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Portfolio Turnover:

Portfolio Turnover is a measure of how frequently assets within a fund are bought and sold by the managers.

R-Squared:

R-Squared is a statistical measure that represents the percentage of a fund or security's movements that can be explained by movements in a benchmark index.

Average Maturity:

In a mutual fund containing debt securities, Average Maturity is the average amount of time until the debt securities mature.

Portfolio Yield:

Portfolio Yield is computed by determining the cash flows for the portfolio and determining the interest rate that will make the present value of the cash flows equal to the market value of the portfolio.

Total Expense Ratio:

Weighted Average i.e. Total Expense of the month / average Asset / number of days in month* days in a year.

Stop trying to time the market ! Invest in a P/E based strategy

In the equity markets, one should invest when the valuation (P/E) is low, not the index level. Simply put we should invest when market is cheaper and the P/E ratio helps us decide this.

- Methodology adopted for P/E based Strategy illustrations:
 - Asset allocation is done on the basis of the table shown here;
 - The equity market/component is represented by NIFTY 50;
 - The balance allocation (i.e. portfolio value minus equity allocation) is considered as debt component;
 - Debt component returns is considered at 6% per annum for the calculation purpose;
 - Any allocation into or out of equity is carried out on the first working day of the month;
 - Variation is defined as the deviation of 20 day Average trailing P/E of NIFTY 50 as at the month-end, compared with its Long-Term Average P/E (i.e. from 1st Jan. 1999).

Enter
