Rajesh Iyer
Chief Executive Officer

Private capex growth - a structural game changer?

GDP growth at 8.2% for 1Q FY 18-19 is indeed positive - best quarterly number during the last 2 years - thanks to an all round performance by manufacturing, construction and agriculture.

GDP growth is thanks to private consumption and government expenditure. Sustainability of these numbers also depends upon when will the private sector capex fire. This is because the other metric to assess sustainability of this trend is growth in investments as measured by gross fixed capital formation (GFCF). Currently the GFCF is healthy but as a percentage of GDP is 28.8% which is way lower than for fiscal year ending March 2015.

The good news is purely from an economic perspective various data points suggest a strong possibility of revival in private capex. The capacity utilisation now stands at 75%+ compared to 70% in 1Q 2015. Primarily the sectors that are already seeing an uptick is chemicals, cement & process industry. The multiple of debt to equity ratio of BSE 500 companies has fallen to 75% from 92% in 2015 - duly supported by improved financial strength of the companies. The availability of capital for growth should not be a big challenge with strong capital markets and the corporate lenders witnessing slowdown in new NPA creations and improved recovery thanks to the Indian Bankruptcy Code. The only other factor which can add a leg to this hypothesis, will be clarity on the political front with the national elections scheduled in 2019.

So if we get a private capex kicker driven GDP momentum then one can expect an increase in demand for money which in turn could potentially lead to rising asset prices, inflation and rising rates. As of today already the cost of equity - risk free rate in terms of 10 year government securities - has been rising and has spiked by 150 bps to 7.7% post demonetisation. This means Equity as an asset class remains the only reasonable weapon available to deal with this potential structural change.

But the dilemma one faces in allocating to equities today:

1. Forward Price to Earnings ratio at 18.3x is highest since 2008
2. Price to Book ratio at 3.2x is highest since 2010
3. Market cap to GDP crosses 90% last seen in 2010
4. Bond – earnings yield spread at 223 bps (last observed in 2010 and 2013 - means reducing relative attractiveness of equities)
5. Large cap stocks discount to mid cap on a P/E basis is at 2007 levels

Given all the above should one postpone investment decisions?

No. Postponing the decision to purchase the desired asset may not work out to be the best option in a potentially inflationary but a growth oriented environment. Household expenditure planning needs to take into account possibility of increase in EMIs.

The takeaway is Asset allocation and Disciplined investing now becomes more critical than ever.

A systematic investment plan towards equities is highly recommended.

We continue to recommend Large Cap, Diversified Portfolios and selective exposure to quality Midcaps with low leverage. Short term and Accrual funds continue to be our picks on the fixed income side.

Equity Market

The market that was

Indian equities were in the green in Aug (~3%) with the remainder of Q1 earnings coming inline and positive flows from FII and DII, albeit slowing. Among the key sectors, Telecom was the key laggard while Pharma, Metals & IT outperformed.

E.A. Sundaram
CIO - Equity

On the macro front, Q1 GDP growth was robust at 8.2% with strong manufacturing & agricultural activity, while growth in services sector fell due to weakness in trade & hotels segment. On the other hand, external pressures continued leading to rupee breaching the 70 mark. On rates, we saw RBI hiking by 25bps for the second consecutive time while maintaining a neutral MPC stance. Monsoons saw some deficiency in the month even as Kerala was ravaged by floods. June IIP rebounded to 4-month high of 7%. Jul CPI reached 9-month low of 4.17% undershooting market expectations. Core inflation moderated marginally to 6.3% from 6.45% previously. July trade deficit deteriorated further to US\$ 18bn (highest since May '13), despite gold imports standing at US \$3bn in July (vs US\$ 7.7bn in May '13 when crude prices were also over US\$100/bbl).

Deal activity was muted in Aug with 6 deals totalling ~\$580mn. FII were net buyers in Aug with inflows of \$101mn with YTD total of \$313mn outflows. DIIs continue to remain buyers with \$403mn inflows led primarily by mutual funds, taking the YTD total to ~\$10.5bn. Mutual Funds were net buyers of \$546mn in Aug while Insurers remained sellers with net outflows of \$143mn

Going Forward

While macros continue to paint a mixed picture (low GST collections, high crude and depreciating INR Vs healthy GDP growth, marginally moderate inflation), the earnings have seen some uptick in Q1 with strong broad based growth seen. Key index heavy weights have provided strong support to headline indices. With three key state elections before the general election in May 2019, and results of the same could be extrapolated to the general elections hence volatility could be witnessed over the next three quarters.

The economy is in a transitory mode and we remain relatively positive on India equity markets given the policy measures implemented over the last few years and potential acceleration in earnings growth. While the valuations from a P/E perspective remain higher than historical averages, earnings uptick should lend sustenance to the same. With the upcoming festive season, demand pickup would be a key variable to watchout for and would provide some direction to markets in the near term.

Debt Market

Macro Review

After three successive months of rise in April, May and June, CPI finally moderated more than expected in July to 4.17% from 4.92%. A large part of the decline as expected came from food inflation, which has remained muted and exhibited far less seasonality than in the past. Core inflation also remains flat at 6.29% in the month, thus avoiding any upward impulse to CPI.

Kumaresh Ramakrishnan
Head – Fixed Income

Sequentially food inflation is moving up recording 1.43% month over month momentum as against 0.94% in June. Nevertheless, the momentum is lower than should be expected at this time of the year, given seasonality arising from monsoon and weather conditions. Veggies moved higher for the third straight month while Pulses also inched higher, though for the first time since September last year.

Fuel inflation also moved higher largely led by revisions to LPG and Kerosene, even as Petrol and Diesel saw some downward price revisions on the back of softening in global crude levels.

GDP – Q1 FY 19

The first quarter GDP numbers released last week showed GDP surging to 8.2% as against 7.7% in Q4. On a year on year basis the jump was steep as Q1 GDP in FY 18 which came in at 5.6%, was impacted by GST implementation which had led to massive inventory de-stocking across channels. This is also the first growth print over 8% in 8 quarters. Notable, nominal GDP growth came in at a healthy 13.8%.

Though optically, it appears that manufacturing was the best contributor, it needs to be kept in mind that the growth here happened from an extremely favourable base led by GST launch last year, which had pulled down this vertical sharply. In contrast, Services grew 7.3% on a much larger base of the previous year (growth of 9.5% in Q1 last year). Agri did well as the initial phase of monsoon has been favourable. Agri grew 5.3% in the quarter.

Importantly, sequential momentum for GDP has shown strength, indicating that in addition to base effect, the underlying growth momentum for the economy is indeed looking up. However, as the base effect turns less favourable, going forward, we expect GDP prints to moderate. Besides the terms of trade also turn less favourable as higher crude oil prices filter through to higher input and fuel costs. GDP for the full year is expected in the range of 7.2-7.4%.

Liquidity and Rates

System liquidity has been marginally in the negative for the month. However this has not had any major impact on short term rates. Intra quarter yields have been in a range as demand for short securities remains strong. The segment beyond one year has witnessed some upward movement pricing in some liquidity tightening in the second half of the financial year and likely rate tightening.

INR had depreciated 7.4% from the start of the calendar year until end July. During the month of August we witnessed renewed decline with the INR losing another 2.84% on the back of weakness in EM currencies amidst strengthening of the US dollar. To be clear, there was some RBI intervention in order to smoothen out the volatility, although given the overall weakness the INR continued to slide.

The sovereign yield curve showed an upward bias through the month. Opening at around 7.77% at the start of the month, the benchmark 10 year G sec closed August at 7.95%, pricing in worries arising from the fiscal, currency and the current account.

The views of the Fund Manager should not be construed as an advice and investors must make their own investment decisions regarding investment/disinvestment in securities market and/or suitability of the funds based on their specific investment objectives and financial positions and using such independent advisors as they believe necessary. None of the information contained in this document shall be constituted as a recommendation to buy or sell any particular security. Mutual Fund investments are subject to market risks, read all scheme related documents carefully.

Outlook

Post the back to back rates hikes in June and August, market yields have been range bound, though with an upward bias. Yield negatives at this point include some tightening both in rates and liquidity that is expected in the second half of the FY. Besides, some head-winds from macro imbalances also seem to be building up mainly from a slide in the Current account position and also some worries on overshooting the fiscal deficit target.

Strong first quarter GDP growth also strengthens the case for a rate tightening as RBI's observations on the closure of the output gap seems to be getting validated. Consolidation of domestic demand conditions and any fillip to exports from a close to 10% depreciation of the INR this calendar year should lead to faster filling up of manufacturing capacities.

Given this backdrop, the continued 'neutral stance' by RBI, in our views offers it adequate room to swing in favour if needed at the October policy. In our view, we do think that one more rate hike is possible this financial year.

Recommended Products

Given that we continue to remain in a rate hiking cycle locally, we continue to recommend shorter duration products in the average maturity range of 1-3 years. These products will limit the volatility for investors at a time when the yield environment is exhibiting an upward bias.

The rise in yields this financial year continue to offer an attractive entry point to investors. We recommend the DHFL Pramerica Short Maturity Fund in this category. Investors with a preference for AAA exposure at the shorter end of the Curve can also consider the DHFL Pramerica Banking and PSU Fund and DHFL Pramerica Premier Bond Fund.

The DHFL Pramerica Credit Risk Fund in the 'accrual category' is recommended for investors seeking a higher carry and having a slightly higher risk appetite.

(An open ended dynamic debt scheme investing across duration)

Rated AAAMfs by ICRA^{##}

Details as on August 31, 2018

This product is suitable for investors who are seeking*

- Regular income for short term.
- To generate returns through active management of a portfolio of debt and money market instruments.
- Degree of risk – MODERATE

* Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

Moderate — investors understand that their principal will be at moderate risk.

Fund Details

Investment Objective: The objective of the Scheme is to seek to generate returns through active management of a portfolio of debt and money market instruments. However, there is no assurance that the investment objective of the Scheme will be realized and the Scheme does not assure or guarantee any returns.

Fund Manager: Mr. Puneet Pal (Over 16 years of experience in Debt Market)

Benchmark: CRISIL Composite Bond Fund Index

Option: Dividend (Monthly and Quarterly - Payout/Reinvestment) and Growth.

Quarterly (Apr-June 2018) Average AUM (₹ in Cr): 135.70

Monthly Average AUM (₹ in Cr): 88.82

AUM as on 31/08/2018 (₹ in Cr): 88.65

Average Maturity: 1.78 yrs

Modified Duration: 1.29 yrs **Portfolio Yield:** 7.16%

Fund Manager's Report: The fund is invested in medium/long term GOI securities. We will continue to look for tactical opportunities to play duration, in an environment of hardening yields.

NAV	Regular Plan	Direct Plan
Growth	₹ 1661.3821	₹ 1750.9685
Monthly Dividend	₹ 1008.8652	₹ 1235.9545
Quarterly Dividend	₹ 1074.2027	₹ 1131.6131

Load Structure[§]; Entry Load: NA. **Exit Load:** If the units are redeemed/switch-out on or before 30 days of allotment – 1%. If the units are redeemed/switch-out after 30 days – Nil

DHFL Pramerica Medium Term Fund (DPMTF)

(Formerly known as DHFL Pramerica Medium Term Income Fund)
(An open ended medium term debt scheme investing in instruments such that the Macaulay duration of the portfolio is between 3 years to 4 years)
Rated AAAMf by ICRA^{##}

Details as on August 31, 2018

This product is suitable for investors who are seeking*

- Income and capital appreciation over the medium term
- Investment in Debt and Money Market Instruments of medium term
- Degree of risk – MODERATE

* Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

Moderate — investors understand that their principal will be at moderate risk.

Fund Details

Investment Objective: To seek to generate income and capital appreciation by investing in a portfolio of debt and money market instruments.

Fund Manager: Mr. Puneet Pal (Over 16 years of experience in Debt Market)

Benchmark: CRISIL Composite Bond Fund Index

Option: Dividend (Regular - Payout/Reinvestment, Monthly, Quarterly and Annual - Payout/Reinvestment/Sweep) and Growth.

Quarterly (Apr-June 2018) Average AUM (₹ in Cr): 538.05

Monthly Average AUM (₹ in Cr): 486.00

AUM as on 31/08/2018 (₹ in Cr): 437.65

Average Maturity: 2.27 yrs

Macaulay Duration: 22.73 months **Portfolio Yield:** 8.77%

Fund Manager's Report: The portfolio is predominantly invested in medium tenor high quality Corporate Bonds. We have reduced the Average Maturity to 2.27 years and intend to keep the duration of the portfolio low in view of the uncertain outlook on yield.

ICRA has assigned the "[ICRA] AAAMs" (pronounced as ICRA triple A m f s) rating to the DHFL Pramerica Insta Cash Fund, DHFL Pramerica Ultra Short Term Fund, DHFL Pramerica Floating Rate Fund, DHFL Pramerica Banking and PSU Debt Fund, DHFL Pramerica Dynamic Bond Fund, DHFL Pramerica Medium Term Fund and DHFL Pramerica Premier Bond Fund. Schemes with this rating are considered to have the highest degree of safety regarding timely receipt of payments from the investments that they have made. ICRA has assigned the "[ICRA] AAAMs" (pronounced as ICRA double A plus m f s) rating to the DHFL Pramerica Short Maturity Fund. Schemes with this rating are considered to have the high degree of safety regarding timely receipt of payments from the investments that they have made.

The ratings should, however, not be construed as an indication of the performance of the Mutual Fund scheme or of volatility in its returns. For complete rating scale and definitions please refer to ICRA's Website www.icra.in or other ICRA Rating Publications ICRA Credit Quality Rating Methodology for debt mutual fund schemes

ICRA's mutual fund rating methodology is based on evaluating the inherent credit quality of the fund's portfolio. As a measure of the credit quality of a debt fund's assets, ICRA uses the concept of "credit scores".

These scores are based on ICRA's estimates of credit risk associated with each exposure of the portfolio taking into account its maturity. To quantify the credit risk scores, ICRA uses its database of historical default rates for various rating categories for various maturity buckets. The credit risk ratings incorporate ICRA's assessment of a debt fund's published investment objectives and policies, its management characteristics, and the creditworthiness of its investment portfolio. ICRA reviews relevant fund information on an ongoing basis to support its published rating opinions. If the portfolio credit score meets the benchmark of the assigned rating during the review, the rating is retained. In an event that the benchmark credit score is breached, ICRA gives a month's time to the debt fund manager to bring the portfolio credit score within the benchmark credit score. If the debt fund manager is able to reduce the portfolio credit score within the benchmark credit score, the rating is retained. If the portfolio still continues to breach the benchmark credit score, the rating is revised to reflect the change in credit quality.

Date of Inception: Regular Plan: January 29, 2004. Alok Agarwal (Equity Portion) is managing this fund since August 2016 and Kumaresh Ramakrishnan (Debt Portion) is managing this fund since April 05, 2018.

[^]Benchmark. NA - Not Available. The above performance is for Regular Plan - Growth Option. Different plans have a different expense structure. Past performance may or may not be sustained in future and should not be used as a basis for comparison with other investments.

How to read the Factsheet

Fund Manager:

An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Application Amount for Fresh Subscription:

This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount:

This is the minimum investment amount for an existing investor in a mutual fund scheme.

Yield to Maturity:

The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

SIP:

SIP or systematic investment plan works on the principle of making periodic investment of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs. 500 every 15th of the month in an equity fund for a period of three years.

NAV:

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Benchmark:

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10- year Gsec.

Entry Load:

A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent.

Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs. 100 and the entry load is 1% the investor will enter the fund at Rs. 101.

Note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.

Exit load:

Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is Rs. 100 and the exit load is 1% the redemption price would be Rs. 99 per unit.

Modified Duration:

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Macaulay Duration:

The Macaulay duration is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price.

Standard Deviation:

Standard Deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Sharpe Ratio:

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta:

Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

AUM:

AUM or assets under management refers to the recent/ updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings:

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/ securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme:

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile:

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Portfolio Turnover:

Portfolio Turnover is a measure of how frequently assets within a fund are bought and sold by the managers.

R-Squared:

R-Squared is a statistical measure that represents the percentage of a fund or security's movements that can be explained by movements in a benchmark index.

Average Maturity:

In a mutual fund containing debt securities, Average Maturity is the average amount of time until the debt securities mature.

Portfolio Yield:

Portfolio Yield is computed by determining the cash flows for the portfolio and determining the interest rate that will make the present value of the cash flows equal to the market value of the portfolio.

Total Expense Ratio:

Weighted Average i.e. Total Expense of the month / average Asset / number of days in month* days in a year.

Stop trying to time the market ! Invest in a P/E based strategy

In the equity markets, one should invest when the valuation (P/E) is low, not the index level. Simply put we should invest when market is cheaper and the P/E ratio helps us decide this.

- Methodology adopted for P/E based Strategy illustrations:
 - Asset allocation is done on the basis of the table shown here;
 - The equity market/component is represented by NIFTY 50;
 - The balance allocation (i.e. portfolio value minus equity allocation) is considered as debt component;
 - Debt component returns is considered at 6% per annum for the calculation purpose;
 - Any allocation into or out of equity is carried out on the first working day of the month;
 - Variation is defined as the deviation of 20 day Average trailing P/E of NIFTY 50 as at the month-end, compared with its Long-Term Average P/E (i.e. from 1st Jan. 1999).

Enter
