PGIM INDIA BALANCED ADVANTAGE FUND

(An open-ended dynamic asset allocation fund)

December 2023

PGIM India Balanced Advantage Fund

An open-ended dynamic asset allocation fund with a floor of minimum 30% directional equity.

Asset allocation decided by the model based on time tested DAAAF model to help “buy low and sell high”

Dynamic model that considers 15 years rolling PE* average considered as the long term average PE* in order to capture changing trends in the equity markets. So the model always remains relevant compared to static asset allocation models.

Tax efficient dynamic asset allocation model as fund is categorized as equity oriented scheme. 65% minimum allocation to equity would be a mix of directional equity and arbitrage.

Endeavour to deliver reasonable downside protection and lower volatility

A solution that helps overcome emotional/behavioral biases for disciplined investing

*P/E variation is defined as the deviation of trailing P/E of Nifty 500 Index (observed on a 20 days moving average basis) from 15 year rolling average P/E of Nifty 500 Index.

Bull, Bear and Flat Market analysis of performance of the model

Bull Phase	Absolute Returns during the Bull Phase		3 Year Absolute Returns post Bull Phase		3 Year CAGR post Bull Phase

Source: Bloomberg, NSE Indices, Internal Research; Data between January 2007 and July 2022.

The back testing results given are merely for the purpose of understanding how does the model works. The returns illustrated above using the P/E strategy is based on assumptions given on slide no. 12. The above table / graph is for illustrative purposes only and should not be construed in any way as guaranteed or promised returns from the model or scheme. Past Performance may or may not be sustained in the future.

For an investment period of 3 years and 5 years, the model could have generated returns of 8% and above over 77% and 90% of the times

Monthly Rolling Returns Based on Investment Period of*		Key Parameters				
		Average Return	Median	Minimum	Maximum	Standard deviation
1 Year	Model	11.69%	9.07%	-33.47%	89.86%	17.36%
	Nifty 500	12.73%	8.93%	-57.13%	98.05%	25.94%
3 Year	Model	11.04%	10.46%	1.26%	26.83%	15.79%
	Nifty 500	11.20%	11.43%	-4.35%	27.66%	24.77%
5 Year	Model	10.45%	9.80%	5.78%	18.74%	8.23%
	Nifty 500	10.33%	11.08%	-2.40%	19.06%	16.39%

Monthly Rolling Returns Based on Investment Period of*		Total Observations	Return Consistency (% of Times)				
			Less than 0%	0-5%	5-8%	8-12%	Greater than 12%
1 Year	Model	193	11.40%	12.95%	16.58%	23.83%	35.23%
	Nifty 500	193	25.39%	12.44%	8.29%	11.92%	41.97%
3 Year	Model	169	0.00%	9.47%	13.61%	41.42%	35.50%
	Nifty 500	169	7.10%	15.98%	8.28%	21.30%	47.34%
5 Year	Model	145	0.00%	0.00%	9.66%	65.52%	24.83%
	Nifty 500	145	2.07%	13.79%	15.86%	24.14%	44.14%

As the investment period increases, volatility in the returns significantly comes down

On a rolling basis, the model has better returns and lower volatility than Nifty 500 (Lumpsum Investment)

*Calculated on a monthly basis. Source: Bloomberg, NSE Indices, Internal Research; Data between January 2007 and December 2023.

The back testing results given are merely for the purpose of understating how does the model works. The returns illustrated above using the P/E strategy is based on assumptions give on slide no. 12. The above table / graph is for illustrative purposes only and should not be construed in any way as guaranteed or promised returns from the model or scheme. Past Performance may or may not be sustained in the future.

The mantra for wealth creation in equity investing

Buy Low

Sell High

But this is easier said than done....

Most investors do the exact opposite...

Domestic Investors invest at High Valuations			
Month	DII Net Inflows (In crores)	NIFTY 500 P/E (Average over the month)	Long Term P/E Average* (Average over the month)
August 2019	20933	26.39	19.04
July 2019	20394	27.71	18.95
October 2018	26033	24.21	18.30
September 2018	12504	28.07	18.23
February 2018	17813	27.50	17.55
September 2017	21025	26.83	17.09
November 2016	18277	24.78	16.57

Domestic Investors withdraw at Low Valuations			
Month	DII Net Inflows (In crores)	NIFTY 500 P/E (Average over the month)	Long Term P/E Average* (Average over the month)
March 2014	-13130	16.77	15.32
October 2013	-12410	16.02	15.29
January 2013	-16207	16.73	15.25

* Long Term P/E Average is the 15 Year rolling average P/E of Nifty 500 Index.; Source: Money Control, Internal Research.

The table above quotes instances when a single month has seen more than Rs.12,000 crore of net inflows at high P/E and more than Rs.12,000 crore of outflows at low P/E

Presenting a solution

PGIM INDIA BALANCED ADVANTAGE FUND

...With the essence of the Dynamic Advantage Asset Allocation Facility (DAAAF)* model and the additional benefits of equity taxation and a minimum constant exposure to equity markets.

*Dynamic Advantage Asset Allocation facility (DAAAF) is an active facility available to investors of all open ended schemes of PGIM India Mutual Fund apart from Fund of Fund schemes. Please visit our website www.pgimindiamf.com for further details of the facility.

How does the PGIM India Balanced Advantage Fund allocate assets?

Asset Allocation for PGIM India Balanced Advantage Fund is guided by the time-tested Dynamic Advantage Asset Allocation Facility (DAAAF) model with

- 15 year rolling P/E of Nifty 500 Index is considered for the long-term P/E average and,
- Minimum exposure to equity and equity related instruments of 65%, with directional equity exposure of at least 30% at all points of time.

Using the model, PGIM India BAF follows the “Buy Low Sell High” mantra, allocates across equity and debt based on the market valuations:

**When the Equity Market is undervalued:
Current P/E lower than Long Term
Average P/E**

**The model recommends incrementally
increasing allocation to equities based
on the defined bands***

**When the Equity Market is overvalued:
Current P/E higher than Long Term
Average P/E**

**The model recommends incrementally
increasing allocation to debt based on the
defined bands***

* Bands as shown in the model tables on slide 10

Current Allocation Model and Portfolio Holdings

NIFTY 500 P/E as on December 29, 2023	24.48	Top 10 Holdings	% Exposure*
Long - term Average P/E of Nifty 500	22.55	Reliance Industries Ltd.	6.87
Last 20 Days Moving Average of Nifty 500 P/E	23.82	HDFC Bank Ltd.	6.40
Variation	6%	ICICI Bank Ltd.	5.97
Applicable P/E Variation Table	Rising	Bajaj Finance Ltd.	2.98
Applicable P/E Variation Band	Maintains existing equity exposure (as per model)	LTIMindtree Ltd.	2.45
		Axis Bank Ltd.	2.44
		Max Healthcare Institute Ltd.	2.39
		JK Cement Ltd.	2.28
		Kotak Mahindra Bank Ltd	2.25
		Avenue Supermarts Ltd.	2.15

*The exposure is of Direct Equity and does not include Arbitrage.

The Asset Allocation model

Table for allocation on ongoing basis

Variation* from Long Term average P/E	Rising Variation***	Variation* from Long Term average P/E	Falling Variation***
Less than -20%	Directional equity exposure 100%	Above 40%	Directional equity exposure 30%
Between -20% and -11%	Maintains existing equity exposure plus switches 50% of debt to equity for every monthly observation	Between 31% and 40%	Shifts 50% money from equity to debt for every monthly observation **
Between -10% and 0%	Maintains existing equity exposure plus switches 10% of debt to equity for every monthly observation	Between 21% and 30%	Directional equity exposure 50%
Between 1% and 10%	Maintains existing equity exposure	Between 11% and 20%	Directional equity exposure 50%
Between 11% and 20%	Maintains existing equity exposure	Between 1% and 10%	Directional equity exposure 65%
Between 21% and 30%	Maintains existing equity exposure	Between -10% and 0%	Maintains existing equity exposure plus switches 10% of debt to equity for every monthly observation
Between 31% and 40%	Shifts 50% money from equity to debt for every monthly observation**	Between -20% and -11%	Maintains existing equity exposure plus switches 50% of debt to equity for every monthly observation
Above 40%	Directional equity exposure 30%	Less than -20%	Directional equity exposure 100%

* P/E variation is defined as the deviation of trailing P/E of Nifty 500 Index (observed on a 20 days moving average basis) from the long term average P/E (15 year rolling average) of Nifty 500 Index.

** This will be subject to the overall equity floor of 30%.

*** Fund will have at least 65% exposure to equity and equity related instruments at all points of time. Within this, minimum directional exposure to Equity will not go below 30% and the balance exposure will be invested in derivatives.

BACK-TESTING RESULTS OF MODEL

Assumptions for performance evaluation

- We have considered the combination of Nifty 500 + CRISIL Liquid Fund Index for the evaluation of the model. The model recommendations have been applied to this combination to understand the performance impact.
- We have chosen a period of January 2007 to March 2022 to include the two largest crashes in the Indian stock markets and the performance of the model during such stressed times.
- The rolling returns have been calculated on a monthly basis since the model allocates assets once every month at the start of the month.
- All of the above returns are calculated on a pre-tax basis.

Capital conservation and investment at right levels has led to better cumulative model performance

The markets have been volatile, giving both positive and negative returns but the model has had a smoother ride. Rs. 10,000 invested in the model in 2007 would have grown 6.1 times compared to 5.9 times in the Nifty 500

Source: Bloomberg, NSE Indices, Internal Research;

The above graph shows performance across calendar years from January 2007 to December 2023.

The back testing results given are merely for the purpose of understanding how the model works. The returns illustrated above using the P/E strategy is based on assumptions given on slide no. 12. The above table / graph is for illustrative purposes only and should not be construed in any way as guaranteed or promised returns from the model or scheme. Past Performance may or may not be sustained in the future.

Major market upheavals have been avoided through the model

The model recommended getting out of equity in November 2007, 2 months before the crash. As markets moved down the model recommended accumulating equity to get the right price

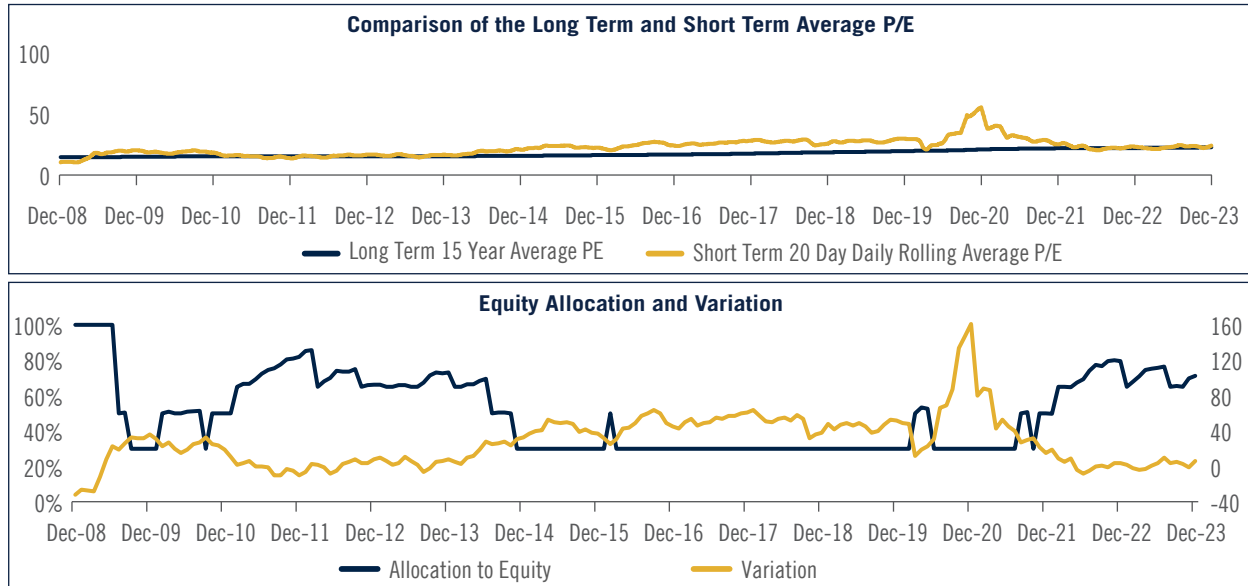

Indian markets suffered during the Taper Tantrum of 2013, at which point the model recommended a higher investment into Equity and bought stocks cheap.

Source: Bloomberg, NSE Indices, Internal Research

The back testing results given are merely for the purpose of understanding how the model works. The returns illustrated above using the P/E strategy is based on assumptions given on slide no. 12. The above table / graph is for illustrative purposes only and should not be construed in any way as guaranteed or promised returns from the model or scheme. Past Performance may or may not be sustained in the future.

Simulation suggests that the model has followed the principle of "Buy Low - Sell High"

Source: Bloomberg, NSE Indices, Internal Research

The back testing results given are merely for the purpose of understanding how the model works. The returns illustrated above using the P/E strategy is based on assumptions give on slide no. 12. The above table / graph is for illustrative purposes only and should not be construed in any way as guaranteed or promised returns from the model or scheme. Past Performance may or may not be sustained in the future. Data as on December 31, 2023

Back-testing shows the model has provided better returns for every bit of risk taken compared to only Equity investment

	Model	Nifty 500
Average Annual return	13.1%	16.1%
Average volatility	21.9%	32.8%
Sharpe Ratio	0.30	0.29

Sharpe Ratio is a measure of the return generated by an investment instrument for every unit of risk taken. Over the period considered, for every unit of risk (volatility) Nifty 500 has generated 0.29 units of return whereas the model has generated higher risk adjusted return at 0.30 units

Source: Bloomberg, NSE Indices, Internal Research;

The above analysis is for performance across calendar years from January 2007 to December 2023.

The back testing results given are merely for the purpose of understating how the model works. The returns illustrated above using the P/E strategy is based on assumptions give on slide no. 12. The above table / graph is for illustrative purposes only and should not be construed in any way as guaranteed or promised returns from the model or scheme. Past Performance may or may not be sustained in the future.

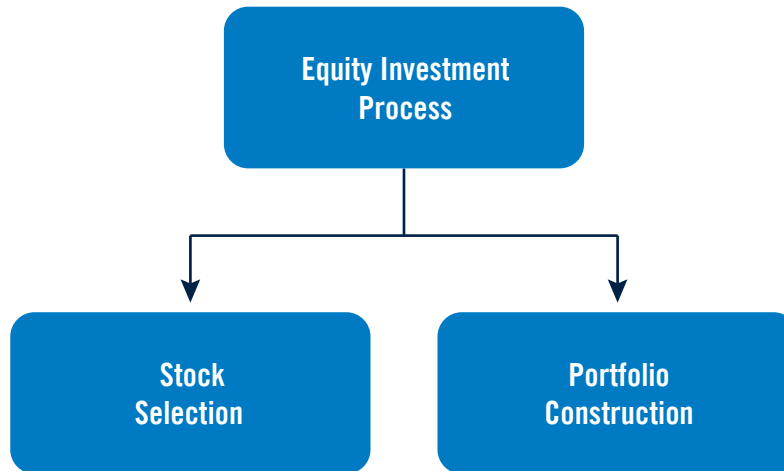

The Sharpe ratio is calculated as Average return – Risk free rate / Average volatility. Risk free rate assumed to be 7%.

PGIM INDIA EQUITY INVESTMENT PROCESS

PGIM India – Equity Investment Process

Our investment process is based on the following pillars:

Stock selection: Criteria to build fund house universe

- The starting point for our fund house universe will be all companies with market cap greater than Rs.1,000 crores (including any IPOs)
- As of Dec-2022, there are 1037 companies with market capitalization greater than Rs 1000 crores*
- We then look at the following 3 parameters to further filter the universe:

Quality

- Higher than peer average RoE
- Sustainable RoE

Growth

- Higher than peer group growth in earnings
- Sustainable earnings growth

Management

- Good quality management
- Good capital allocation track record
- Operating cash flow positive in 7 out of 10 years (ex financials) (In companies with less than 10 years of data available, at least 70% of the years should have generated positive operating cash flows)

*Source: AMFI

Portfolio Construction: Designing an optimal portfolio

Portfolio construction principles

-  Diversification
-  High Active Share
-  Lower portfolio turnover
-  True to mandate

Asset Allocation the best strategy

Contribution to returns

- Landmark study conducted by Brinson et al.
- Concluded that the performance of a portfolio was explained the most by their asset allocation decision.
- Other decisions such as stock selection and market timing play a relatively smaller role.
