I. INTRODUCTION

A. RISK FACTORS

i. STANDARD RISK FACTORS:

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal;
- As the price/value/interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down;
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme;
- The name of the Scheme does not in any manner indicate either the quality of the scheme or its future prospects and returns;
- Save as otherwise provided in the Regulations, the Sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs.1,00,000/- made by it towards setting up the Fund;
- The present Scheme is not guaranteed or assured return schemes.

ii. SCHEME SPECIFIC RISK FACTORS

Some of the Scheme specific risk factors include, but not limited, to the following:-

1. Risk associated with investing in Fixed Income Securities

- **Interest Rate Risk:** Market value of fixed income securities is generally inversely related to interest rate movement. Accordingly, value of portfolio of the scheme may fall if the market interest rate rise and may appreciate when the market interest rate comes down.
- **Credit Risk:** - This is risk associated with default on interest and /or principal amounts by issuers of fixed income securities. In case of a default, scheme may not fully receive the due amounts and NAV of the scheme may fall to the extent of default.
- **Spread Risk:** - Credit spreads on corporate bonds may change with varying market conditions. Market value of debt securities in portfolio may depreciate if the credit spreads widen and vice –versa. Similarly, in case of floating rate securities, if the spreads over the benchmark security / index widen, then the value of such securities may depreciate.
- **Liquidity Risk:** - Liquidity condition in market varies from time to time. In an environment of tight liquidity, necessity to sell securities may have higher than usual impact cost. Further, liquidity of any particular security in portfolio may lessen depending on market condition, requiring higher discount at the time of selling.
- **Counterparty Risk:** - This is the risk of failure of counterparty to a transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the Scheme in case of a counterparty default.
- **Re-investment Risk:** - Investment in fixed income securities carries re-investment risk. Interest rates prevailing on the coupon payment or maturity date may differ from the

purchase yield of the security. This may result in final realized yield to be lower than that expected at the time of purchase.

- The Scheme at times may receive large number of redemption requests, leading to an asset-liability mismatch and therefore, requiring the investment manager to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments
- **Risks associated with unrated instruments:** - Investments in unrated instruments are subject to the risk associated with investments in any other fixed income securities, as referred above. However, investments in unrated instruments are considered to be subject to greater risk of loss of principal and interest than rated instruments.

2. Risk factors associated with Trading in Derivatives:

Derivatives are high risk, high return instruments as they may be highly leveraged. A small price movement in the underlying security could have a large impact on their value and may also result in a loss.

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

The Fund may use derivative instruments like Interest Rate Swaps, Forward Rate Agreements or other derivative.

Credit Risk: The credit risk is the risk that the counter party will default on its obligations and is generally low, as there is no exchange of principal amounts in a derivative transaction.

Illiquidity risk: The risk that a derivative cannot be sold or purchased quickly enough at a fair price, due to lack of liquidity in the market.

Market risk: Derivatives carry the risk of adverse changes in the market price.

Floating Leg Risk : The fund pays the daily compounded rate. In practice however there can be a difference in the actual rate at which money is lent in the call market and the benchmark, which appears and is used.

In case of a received position in a call rate linked interest rate swaps (OIS), the fund pays the daily compounded rate. In practice however there can be a difference in the actual rate at which money is lent in the call market and the benchmark call rate, which is used in the swap calculations. The risk is to the extent that returns may be impacted to the investors in case of extreme movement in call rates.

It may be mentioned here that the guidelines issued by Reserve Bank of India from time to time for forward rate agreements and interest rate swaps and other derivative products would be adhered to.

3. Risk envisaged and mitigation measures for repo transactions :

- **Counterparty Risks** - Risks could arise if the Counterparty does not return the security (in a borrowing transaction) as contracted or pay interest (lending transaction) on the due date. This risk is largely mitigated, as the choice of counterparties is 'restricted' and their credit ratings and overall credit risk levels are taken into account before entering into such transactions.
- **Settlement Risks** - Operational risks are lower as such trades are settled on a DVP (Delivery versus Payment – Safe settlement) basis. The trades are settled on a bilateral basis in the OTC segment.
- **Collateral / Credit Risk** - In the event of the scheme being unable to pay back the money to the Counterparty as contracted, the counter party may dispose of the assets (as they have sufficient margin) and the net proceeds if any after such disposal may be refunded to the scheme. The value of the collateral will be monitored on a daily basis and shortfalls if any will lead to demand on the counterparty to top up collateral. In ability to comply with top up requests could lead to liquidation of security / collateral and an early / premature termination of the agreement.

- **Risk of Co-mingling**

The Servicers normally deposit all payments received from the Obligors into the Collection Account. However, there could be a time gap between collection by a Servicer and depositing the same into the Collection account especially considering that some of the collections may be in the form of cash. In this interim period, collections from the Loan Agreements may not be segregated from other funds of the Servicer. If the Servicer fails to remit such funds due to Investors, the Investors may be exposed to a potential loss. Due care is normally taken to ensure that the Servicer enjoys highest credit rating on standalone basis to minimize Co-mingling risk.

4. Risks associated with segregated portfolio

- Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer.
- Security comprising of segregated portfolio may not realise any value
- Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV

5. Risks associated with investing in Tri-Party Repo through CCIL (TREPS)

The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. CCIL maintains prefunded resources in all the clearing segments to cover potential losses arising from the default member. In the event of a clearing member failing to honour his settlement obligations, the default Fund is utilized to complete the settlement. The sequence in which the above resources are used is known as the "Default Waterfall". As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss,

it is appropriated from the default fund contributions of the non-defaulting members. Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

6. Risk associated with Securities Lending & Short Selling

- Purchasing a security entails the risk of the security price going down. Short selling of securities (i.e. sale of securities without owning them) entails the risk of the security price going up there by decreasing the profitability of the short position. Short selling is subject to risks related to fluctuations in market price, and settlement/liquidity risks. If required by the Regulations, short selling may entail margin money to be deposited with the clearing house and daily mark to market of the prices and margins. This may impact fund pricing and may induce liquidity risks if the fund is not able to provide adequate margins to the clearing house. Failure to meet margin requirements may result in penalties being imposed by the exchanges and clearing house.
- Engaging in securities lending is subject to risks related to fluctuations in collateral value and settlement/liquidity and counter party risks. The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the scheme and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities and this can lead to temporary illiquidity and in turn cannot protect from the falling market price of the said security.

7. Risks associated with Securities Lending and Borrowing (SLB)

Securities Lending is lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. The risks in security lending consist of the failure of intermediary / counterparty, to comply with the terms of agreement entered into between the lender of securities i.e. the scheme and the intermediary / counterparty. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The scheme may not be able to sell lent out securities, which can lead to temporary illiquidity & loss of opportunity.

8. Risks factors associated with processing of transaction through Stock Exchange Mechanism:

The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognised stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing/settlement, etc. upon which the Fund has no control. Moreover, transactions

conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s).

9. Risk on Right to limit redemption:

Subject to the approval of Board of Directors of the AMC and Trustee Company and immediate intimation to SEBI, a restriction on redemptions may be imposed by the Scheme under certain exceptional circumstances, which the AMC / Trustee believe that may lead to a systemic crisis or event that constrict liquidity of most securities or the efficient functioning of markets. Please refer to the paragraph “Right to Limit Redemptions” for further details.

10. Backstop facility in form of investment in Corporate Debt Market Development Fund (CDMDF):

CDMDF is set up as a scheme of the Trust registered as an Alternative Investment Fund (‘AIF’) in accordance with the SEBI (Alternative Investment Funds) Regulations, 2012 (“AIF Regulations”). The objective of the CDMDF is to help to develop the corporate debt market by providing backstop facility to instill confidence amongst the market participants in the corporate debt/bond market during times of market dislocation and to enhance the secondary market liquidity. In times of market dislocation, CDMDF shall purchase and hold eligible corporate debt securities from the participating investors (i.e., specified debt-oriented MF schemes to begin with) and sell as markets recover. The CDMDF will thus act as a key enabler for facilitating liquidity in the corporate debt market and to respond quickly in times of market dislocation. The trigger and period for which the backstop facility will be open shall be as decided by SEBI. Thus this backstop facility will help fund managers of the aforementioned Schemes to better generate liquidity during market dislocation to help the schemes fulfill liquidity obligations under stress situation.

In accordance with the requirement of regulation 43A of SEBI (Mutual Funds) Regulations, 1996 read with SEBI circular no. SEBI/HO/IMD/PoD2/P/CIR/2023/129 dated July 27, 2023 on Investment by Mutual Fund Schemes in units of Corporate Debt Market Development Fund, the aforementioned schemes shall invest 25 bps of its AUM as on December 31, 2022 in the units of the Corporate Debt Market Development Fund (‘CDMDF’). An incremental contribution to CDMDF shall be made every six months to ensure 25 bps of scheme AUM is invested in units of CDMDF. However, if AUM decreases there shall be no return or redemption from CDMDF. Contribution made to CDMDF, including the appreciations on the same, if any, shall be locked-in till winding up of the CDMDF.

We would further like to bring to the notice of the investors that investments in CDMDF units shall not be considered as violation while considering maturity restriction as applicable for various purposes (including applicable Investment limits) and the calculations of Potential Risk Class (PRC) Matrix, Risk-o-meter, Stress testing and Duration for various purposes shall be done after excluding investments in units of CDMDF.

Investors are requested to read details disclosure on investment of the schemes in the CDMDF as listed in sub- section “C. How will the Scheme allocate its assets? And sub-section D. Where will the Scheme Invest” in Section “Section II- Information about the scheme.

Risk Mitigation Measures by AMC:

The Fund by utilizing a holistic risk management strategy will endeavor to manage risks associated with investing in debt markets. The risk control process involves identifying & measuring the risk through various risk measurement tools.

The Fund has identified following risks of investing in debt and designed risk management strategies, which are embedded in the investment process to manage such risks.

Nature of Risk	Risk Mitigation Measures by AMC
For making investments in Fixed Income and Money Market Instruments	
<p>Credit Risk: Debt securities are subject to the risk of an issuer’s inability to meet principal and interest payments on the obligations.</p>	<p>The fund has a strong credit research process. The credit team analyses and approves each issuer before investment by the scheme. There is a regulatory and internal cap on exposure to each issuer. This ensures a diversified portfolio and reduced credit risk in the portfolio.</p>
<p>Liquidity Risk: The corporate debt market is relatively illiquid vis-à-vis the government securities market. Even though the government securities market is more liquid compared to that of other debt instruments, on occasions, there could be difficulties in transacting in the market due to extreme volatility or unusual constriction in market volumes or on occasions when an unusually large transaction has to be put through.</p>	<p>The schemes are envisaged to be actively managed portfolios. The liquidity and volatility of a security are important criteria in security selection process. This ensures that liquidity risk is minimized.</p>
<p>Investing in unrated securities: Lower rated or unrated securities are more likely to react to developments affecting the market and the credit risk than the highly rated securities which react primarily to movements in the general level of interest rates. Lower rated securities also tend to be more sensitive to economic conditions than higher rated securities.</p>	<p>The schemes have a strong credit research process and as such all investments, rated or unrated, are analyzed and approved by the credit team before investment by the scheme. Further there is a regulatory and internal cap on exposure to unrated issuers, limiting exposure to unrated securities.</p>
<p>Investing in unlisted securities: The Schemes may invest in securities which are not quoted on a stock exchange (“unlisted securities”) which in general are subject to greater price fluctuations, less liquidity and greater risk than those which are traded in the open market. Unlisted securities may lack a liquid secondary market and there can be no assurance that the Schemes will realise its investments in unlisted securities at a fair value.</p>	<p>The scheme will predominantly invest in listed securities and in some instances, invest in securities which are expected to be listed. Further, listing of debt securities typically has no significant impact on the liquidity, trading volatility and price discovery.</p>

<p>Settlement Risk: Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are not invested and no return is earned thereon.</p>	<p>The AMC has well laid out processes and systems, which mitigate operational risks attached with the settlement process.</p>
<p>Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the Plans are reinvested. The additional income from reinvestment is the “interest on interest” component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.</p>	<p>Reinvestment risk is an inherent feature of the portfolio management process. It may be managed, to a certain extent, by seeking to invest in securities with relatively low intermittent cash flows.</p>

The scheme shall ensure to take remedial actions in line with the requirements of the aforementioned circular.</p> <p>Also, back testing analysis is performed which involves capturing actual outflow for each scheme and comparing the same with minimum LRaR and LCRaR required to be maintained by the scheme.</p>

Position of Debt Market in India

The Indian debt market, one of the largest in Asia, is developing rapidly buoyed by a multitude of factors including new instruments, increased liquidity, deregulation of interest rates and improved settlement systems. The major players in the Indian debt markets today are banks, financial institutions, insurance companies, pension funds, provident funds and mutual funds. The instruments in the market can be broadly categorized as those issued by corporates, banks, financial institutions and those issued by state/central governments. The risks associated with any investments are - credit risk, interest rate risk and liquidity risk. While corporate papers carry credit risk due to changing business conditions, government securities carry zero credit risk. Interest rate risk is present in all debt securities and depends on a variety of macroeconomic factors. The largest segment of the Indian Debt market consists of the Government of India securities where the daily average trading volume is in excess of Rs. 20,000 crores, with instrument tenors ranging from short dated Treasury Bills to long dated securities extending upto 30 years. The Corporate bond market, though relatively less liquid, is also fast developing with an increased participation from the banks, Financial Institutions, mutual funds, provident funds, insurance companies and corporate treasuries. Public Financial Institutions, Public Sector Undertakings and Private AAA Corporates are the major issuers. Corporate bonds majorly are issued as fixed rate bonds. The yield curve usually tends to be positive sloping i.e. yield of shorter dated securities being lower than that of longer dated ones.

The money markets in India essentially consist of call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at specified price), Tri-Party Repo, commercial papers (CPs, short term unsecured promissory note, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI). A

predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates.

Hedging Policies in connection with Trading in Derivatives

SEBI has vide its paragraph 12.28.1.4 of Master Circular dated May 19, 2023 has permitted all the mutual funds to participate in the derivatives trading subject to observance of guidelines issued by SEBI in this behalf. Pursuant to this, the mutual funds may use various derivative and hedging products from time to time, as would be available and permitted by SEBI, in an attempt to protect the value of the portfolio and enhance Unit holders' interest.

Pursuant to paragraph 7.5, 7.6 and 12.25 of SEBI Master Circular dated May 19, 2023 and such other circular issued by SEBI from time to time in this regard, the Fund may use derivative instruments like Interest Rate Swaps, Forward Rate Agreements, stock future or other derivative instruments for the purpose of hedging and portfolio balancing or for its efficient management.

Derivative instruments may take form of Interest rate swaps, Forward rate agreements and such other derivative instruments as may be available from time to time and appropriate for the portfolio.

The risks and returns ensuing from such investments are explained herein below:

Interest rate Swaps

An interest rate swap is an agreement whereby two parties agree to exchange periodic interest payments. The amount of interest payments exchanged is based on some predetermined principal, called notional principal amount. The amount each counter party pays to the other is the agreed upon periodic interest rate multiplied by the notional principal amount. The only amount that is exchanged between the parties are the interest payment, not the notional principal amount.

considerably even with a small price movement (the scheme will not take a leveraged exposure). It requires a high level of knowledge, understanding and surveillance to control risk.

The Scheme, however, will use the derivative instruments very judiciously and keep in mind the overall objective the scheme.

The Trustees shall offer their comments on the above aspects in the report filed with SEBI under sub regulation (23) (a) of regulation 18 of Securities and Exchange Board of India (Mutual Funds) Regulations, 1996.

Risk Control

Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process.

The risk control process involves reducing risks through portfolio diversification, taking care however not to dilute returns in the process. The AMC believes that this diversification would help achieve the desired level of consistency in returns. Stock specific risk will be minimized by investing only in those companies that have been analyzed by the Investment Team at the AMC. For investments in debt securities, the AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, rigorous and in-depth credit evaluation of the securities proposed to be invested in, will be carried out by the investment team of the AMC. Rated Debt instruments in which the Scheme invests will be of investment grade as rated by a credit rating agency. The AMC will be guided but not limited by the ratings of Rating Agencies such as CRISIL, CARE, ICRA and Fitch or any other rating agencies that may be registered with SEBI from time to time. In case a debt instrument is not rated, investment will be in accordance with Guidelines approved by the Board. Further, all investments in the unrated paper are periodically reviewed by Investment Committee and the Board of AMC & Trustee Company.

The Scheme may also use various derivatives and hedging products from time to time, as would be available and permitted by SEBI, in an attempt to protect the value of the portfolio and enhance Unitholders' interest.

Portfolio Turnover

The Scheme is an open-ended scheme. It is expected that there would be a number of subscriptions and redemptions on a daily basis. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio.

Investments by the AMC in the Scheme

The AMC may invest in the Scheme, subject to the Regulations and to the extent permitted by its Board from time to time. As per the existing Regulations, the AMC will not charge investment management and advisory fee on the investment made by it in the Scheme.

Investments by the AMC in units of CDMDF

In terms of sub-regulation 16(A) in Regulation 25 of SEBI (Mutual Funds) Regulations, 1996 read along with clause 6.9 of the SEBI Master Circular dated May 19, 2023 and AMFI Best Practice Guidelines Circular No.100 /2022-23 dated April 26, 2022 on 'Alignment of interest of AMCs with the Unitholders of the Mutual Fund schemes', the AMC shall invest such amounts in such schemes of the mutual fund, based on the risks associated with the schemes, as may be specified by the SEBI from time to time.

Pursuant to regulation 43A of SEBI (Mutual Funds) Regulations, 1996 and SEBI circular no. SEBI/HO/IMD/PoD2/P/CIR/2023/129 dated July 27, 2023 on Investment by Mutual Fund Schemes and AMCs in units of Corporate Debt Market Development Fund, AMC shall make a one-time contribution equivalent to 2 bps of the AUM of the specified debt oriented schemes as on December 31, 2022 in the units of the Corporate Debt Market Development Fund ('CDMDF') within 10 working days of request from CDMDF. Contribution made to CDMDF, including the appreciations on the same, if any, shall be locked-in till winding up of the CDMDF.

4. COMPUTATION OF NAV

NAV of Units under the Scheme will be calculated by following methods:

$$\text{NAV (Rs.)} = \frac{\text{Market or Fair Value of Scheme's investments} + \text{Current Assets} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under the Scheme}}$$

Note:

- The NAV is rounded off upto 4 decimal places.
- Separate NAV will be calculated and disclosed for each Plan/Option.
- The AMC will calculate and disclose the NAV of the Scheme on all the Business Days.

•The valuation of the Scheme’s assets and computation of the Scheme’s NAV shall be subject to audit on an annual basis and such regulations as may be prescribed by SEBI from time to time.

The numerical illustration of the above method id provided below

Market or Fair Value of Scheme’s investment (Rs.) = 1,15,12,05,600.00

Current Assets (Rs.) = 60,00,000.00

Current Liabilities (Rs.) = 40,00,000.00

No of units Outstanding under the scheme = 10,00,00,000

$$\text{NAV Per Unit (Rs.)} = \frac{115,12,05,600 + 60,00,000 - 40,00,000}{10,00,00,000} = 11.5321$$

The NAV will be calculated as of the close of every Business Day.

H. SWING PRICING FRAMEWORK

Paragraph 4.10 of SEBI Master Circular dated May 19, 2023, has introduced swing pricing framework for open ended debt mutual fund schemes (except overnight funds, Gilt funds and Gilt with 10-year maturity funds) w.e.f May 01, 2022. SEBI has prescribed swing pricing for scenarios related to net

outflows from the schemes. Accordingly, a mandatory full swing during market dislocation times for high-risk open ended debt schemes is being introduced in all open-ended debt schemes of PGIM India Mutual Fund (except PGIM India Overnight Fund and PGIM India Gilt Fund) as per the provisions given below :

Provision for Swing pricing during Market Dislocation

- a) **Swing Pricing:** Swing pricing refers to a process for adjusting a scheme’s Net Asset Value (NAV) to effectively pass on transaction costs stemming from significant net capital activity (i.e., flows into or out of the fund) to the investors associated with that activity. Swing pricing is an anti-dilution adjustment that seeks to protect investors in a scheme from performance dilution as a result of significant outflows from the scheme, particularly during market dislocation.
- b) **Market Dislocation Period:** Market dislocation would be declared and notified by SEBI either suo moto or based on recommendations made by Association of Mutual Funds in India (AMFI). Swing pricing will be applicable for a specified period as notified by SEBI.
- c) **Swing Pricing Framework:** Subsequent to the announcement of market dislocation, the swing pricing framework shall be mandated only for the Eligible open ended debt schemes of the Mutual Fund (except PGIM India Overnight Fund and PGIM India Gilt Fund) which fulfill both the following conditions
 - i. have High or Very High risk on the risk-o-meter (as of the most recent period at the time of declaration of market dislocation) ; and
 - ii. classify themselves, on the date of declaration, in the cells A-III, B-II, B-III, C-I, C-II and C-III of Potential Risk Class (PRC) Matrix in terms of paragraph 17.5 of SEBI Master Circular dated May 19, 2023.
- d) **Swing Factor:** The minimum swing factor as given below will be applicable. This shall be made applicable to the schemes mentioned above and the NAV will be adjusted downward for swing factor.

Minimum swing factor for open ended debt schemes			
Maximum Credit Risk of scheme →	Class A (CRV* \geq 12)	Class B (CRV \geq 10)	Class C (CRV $<$ 10)
Maximum Interest Rate Risk of scheme ↓			
Class I: (MD \leq 1 year)	NIL	NIL	1.50%
Class II: (MD \leq 3 years)	NIL	1.25%	1.75%
Class III: Any Macaulay duration	1.00%	1.50%	2.00%
*CRV: Credit Risk Value			

- e) **Applicability of Swing Pricing:**
 - i. Mandatory full swing pricing as stated above, when notified by SEBI, shall be applicable to schemes that fulfil the criterion indicated in points c(i) and c(ii) above as on the date of declaration of the market dislocation.
 - ii. When swing pricing mechanism is triggered and swing factor is made applicable during market dislocation, both the entering and exiting investors shall get NAV adjusted for swing pricing.
 - iii. Swing pricing shall be made applicable to all unitholders at PAN level, with an exemption for redemptions up to Rs. 2 lacs for each mutual fund scheme for market dislocation
 - iv. As mandated by SEBI, to begin with, Swing pricing shall be applicable to scenarios related to net outflows from the schemes.
- f) **Illustration on the swing pricing effect on the NAV for incoming and outgoing investors.**

Consider a scheme having NAV of Rs 100 and Swing Factor of 1%, the NAV shall be adjusted as below on issue of notification of market dislocation by SEBI:

Swing NAV = Unswung NAV * (1 – Swing Factor)

= Rs. 100 * (1-0.01)

= Rs. 100 * (0.99)

= Rs. 99

If there is any exit load applicable as per scheme provisions, the same will be applied on swung NAV.

- g) Computation of NAV for purpose of scheme performance: The scheme performance shall be computed based on unswung NAV.
- h) Disclosures pertaining to NAV adjusted for swing factor: Disclosures pertaining to NAV adjusted for swing factor along with the performance impact (in the following format as prescribed by SEBI) shall be made in the SIDs of respective Eligible schemes and in scheme wise Annual Reports and Abridged summary and the same shall be disclosed on the website prominently only if swing pricing framework has been made applicable for the said mutual fund scheme.
