I. Introduction

A. RISK FACTORS

i) Standard Risk Factors

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal;
- As the price/value/interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down;
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme;
- The name of the Scheme does not in any manner indicate either the quality of the scheme or its future prospects and returns;
- Save as otherwise provided in the Regulations, the Sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs.1,00,000/- made by it towards setting up the Fund;
- The present Scheme is not guaranteed or assured return schemes.

ii) Scheme Specific Risk Factors

Some of the Scheme specific risk factors include, but not limited, to the following:-

1. Risk associated with investing in Fixed Income Securities

- Interest Rate Risk: Market value of fixed income securities is generally inversely related to interest rate movement. Accordingly, value of portfolio of the scheme may fall if the market interest rate rise and may appreciate when the market interest rate comes down.
- Credit Risk: This is risk associated with default on interest and /or principal amounts by issuers of fixed income securities. In case of a default, scheme may not fully receive the due amounts and NAV of the scheme may fall to the extent of default.
- Spread Risk: Credit spreads on corporate bonds may change with varying market conditions. Market value of debt securities in portfolio may depreciate if the credit spreads widen and vice –versa. Similarly, in case of floating rate securities, if the spreads over the benchmark security/index widen, then the value of such securities may depreciate.
- Liquidity Risk: Liquidity condition in market varies from time to time. In an environment of tight liquidity, necessity to sell securities may have higher than usual impact cost. Further, liquidity of any particular security in portfolio may lessen depending on market condition, requiring higher discount at the time of selling.
- Counterparty Risk: This is the risk of failure of counterparty to a transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the Scheme in case of a counterparty default.
- Re-investment Risk: Investment in fixed income securities carries re-investment risk. Interest rates prevailing on the coupon payment or maturity date may differ from the purchase yield of the security. This may result in final realized yield to be lower than that expected at the time of purchase.
- The Scheme at times may receive large number of redemption requests, leading to an asset-liability mismatch and therefore, requiring the investment manager to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments
- Risks associated with unrated instruments: Investments in unrated instruments are subject to the risk associated with investments in any other fixed income securities, as referred above. However, investments in unrated instruments are considered to be subject to greater risk of loss of principal and interest than rated instruments.

2. Risk factors associated with Trading in Derivatives:

Derivatives are high risk, high return instruments as they may be highly leveraged. A small price movement in the underlying security could have a large impact on their value and may also result in a loss.

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

The Fund may use derivative instruments like Interest Rate Swaps, Forward Rate Agreements or other derivative.

Credit Risk: The credit risk is the risk that the counter party will default on its obligations and is generally low, as there is no exchange of principal amounts in a derivative transaction.

Illiquidity Risk: The risk that a derivative cannot be sold or purchased quickly enough at a fair price, due to lack of liquidity in the market.

Market risk: Derivatives carry the risk of adverse changes in the market price.

Floating Leg Risk : The fund pays the daily compounded rate. In practice however there can be a difference in the actual rate at which money is lent in the call market and the benchmark, which appears and is used.

In case of a received position in a call rate linked interest rate swaps (OIS), the fund pays the daily compounded rate. In practice however there can be a difference in the actual rate at which money is lent in the call market and the benchmark call rate, which is used in the swap calculations. The risk is to the extent that returns may be impacted to the investors in case of extreme movement in call rates.

It may be mentioned here that the guidelines issued by Reserve Bank of India from time to time for forward rate agreements and interest rate swaps and other derivative products would be adhered to.

3. Risk envisaged and mitigation measures for repo transactions:

- Counterparty Risks - Risks could arise if the Counterparty does not return the security (in a borrowing transaction) as contracted or pay interest (lending transaction) on the due date. This risk is largely mitigated, as the choice of counterparties is ‘restricted’ and their credit ratings and overall credit risk levels are taken into account before entering into such transactions.
- Settlement Risks - Operational risks are lower as such trades are settled on a DVP (Delivery versus Payment – Safe settlement) basis. The trades are settled on a bilateral basis in the OTC segment.
- Collateral / Credit Risk - In the event of the scheme being unable to pay back the money to the Counterparty as contracted, the counter party may dispose of the assets (as they have sufficient margin) and the net proceeds if any after such disposal may be refunded to the scheme. The value of the collateral will be monitored on a daily basis and shortfalls if any will lead to demand on the counterparty to top up collateral. In ability to comply with top up requests could lead to liquidation of security / collateral and an early / premature termination of the agreement.
- Risk of Co-mingling

The Servicers normally deposit all payments received from the Obligors into the Collection Account. However, there could be a time gap between collection by a Servicer and depositing the same into the Collection account especially considering that some of the collections may be in the form of cash. In this interim period, collections from the Loan Agreements may not be segregated from other funds of the Servicer. If the Servicer fails to remit such funds due to Investors, the Investors may be exposed to a potential loss. Due care is normally taken to ensure that the Servicer enjoys highest credit rating on standalone basis to minimize Co-mingling risk.

4. Risks associated with segregated portfolio

- Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer.
- Security comprising of segregated portfolio may not realise any value.
- Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of the shares in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.
5. Risks associated with investing in Tri-Party Repo through CCIL (TREPS)

The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. CCIL maintains prefunded resources in all the clearing segments to cover potential losses arising from the default member. In the event of a clearing member failing to honour his settlement obligations, the default Fund is utilized to complete the settlement. The sequence in which the above resources are used is known as the “Default waterfall”. As per the waterfall mechanism, after the defaulter’s margins and the defaulter’s contribution to the default fund have been appropriated, CCIL’s contribution is used to meet the losses. Post utilization of CCIL’s contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members. Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulter member). The schemes have a strong credit research process. The credit team analyses and approves each issuer before investment by the scheme. There is a regulatory and internal cap on exposure to each issuer. This ensures a diversified portfolio and reduced credit risk in the portfolio.

Risk Mitigation Measures by AMC:

<table>
<thead>
<tr>
<th>Nature of Risk</th>
<th>Risk Mitigation Measures by AMC</th>
</tr>
</thead>
<tbody>
<tr>
<td>For making investments in Fixed Income and Money Market Instruments</td>
<td>The fund has a strong credit research process. The credit team analyses and approves each issuer before investment by the scheme. There is a regulatory and internal cap on exposure to each issuer. This ensures a diversified portfolio and reduced credit risk in the portfolio.</td>
</tr>
<tr>
<td>Credit Risk: Debt securities are subject to the risk of an issuer’s inability to meet principal and interest payments on the obligations.</td>
<td>The schemes are envisaged to be actively managed portfolios. The liquidity and volatility of a security are important criteria in security selection process. This ensures that liquidity risk is minimized.</td>
</tr>
<tr>
<td>Liquidity Risk: The corporate debt market is relatively illiquid vis-à-vis the government securities market. Even though the government securities market is more liquid compared to that of other debt instruments, on occasions, there could be difficulties in transacting in the market due to extreme volatility or unusual constriction in market volumes or on occasions when an unusually large transaction has to be put through.</td>
<td>The schemes have a strong credit research process and as such all investments, rated or unrated, are analyzed and approved by the credit team before investment by the scheme. Further there is a regulatory and internal cap on exposure to unrated issuers, limiting exposure to unrated securities.</td>
</tr>
<tr>
<td>Investing in unrated securities: Lower rated or unrated securities are more likely to react to developments affecting the market and the credit risk than the highly rated securities which react primarily to movements in the general level of interest rates. Lower rated securities also tend to be more sensitive to economic conditions than higher rated securities.</td>
<td>The scheme will predominantly invest in listed securities and in some instances, invest in securities which are expected to be listed. Further, listing of debt securities typically has no significant impact on the liquidity, trading volatility and price discovery.</td>
</tr>
<tr>
<td>Investing in unlisted securities: The Schemes may invest in securities which are not quoted on a stock exchange (“unlisted securities”) which in general are subject to greater price fluctuations, less liquidity and greater risk than those which are traded in the open market. Unlisted securities may lack a liquid secondary market and there can be no assurance that the Schemes will realise its investments in unlisted securities at a fair value.</td>
<td>The scheme is envisaged to be actively managed portfolios. The liquidity and volatility of a security are important criteria in security selection process. This ensures that liquidity risk is minimized.</td>
</tr>
<tr>
<td>Settlement Risk: Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are not invested and no return is earned thereon.</td>
<td>The AMC has well laid out processes and systems, which mitigate operational risks attached with the settlement process.</td>
</tr>
<tr>
<td>Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the Plans are reinvested. The additional income from reinvestment is the “interest on interest” component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.</td>
<td>Reinvestment risk is an inherent feature of the portfolio management process. It may be managed, to a certain extent, by seeking to invest in securities with relatively low intermittent cash flows.</td>
</tr>
</tbody>
</table>

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. However, if such limit is breached during the NFO of the Scheme, the Fund will endeavor to ensure that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the Scheme complies with these two conditions. In case the Scheme does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25% limit. Failure on the part of the said investor to redeem his exposure over the 25% limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

E. WHAT ARE THE INVESTMENT STRATEGIES?

The investment objective of the Scheme is to generate returns by investing in money market securities with maturity of up to 1 year. These securities include commercial papers issued by corporations, commercial bills, treasury bills, Government securities having an unexpired maturity up to one year, call or notice money, certificate of deposits, usance bills, and any other-like instruments as specified by SEBI and RBI from time to time.

Position of Debt Market in India

The debt market in India is estimated at about Rs. 4,000,000 Crores as of now. A bulk of the debt market consists of Government Securities (both Central and State). Other instruments issued and traded include Corporate Debentures, Bonds issued by Financial Institutions, Commercial Paper, Certificates of Deposits and Securitized Debt. Securities in the debt market typically vary based on their tenure and rating. Government Securities have tenures from one year to forty years whereas the maturity period of the Corporate Debt varies from one year to fifteen years. Recently few of the banks have also started issuing perpetual bonds. Also as per regulations, most securities are being issued on a listed basis including CPs and NCDs. While in the corporate bond market, deals are conducted over telephone and are entered on principal-to-principal basis, due to the introduction of the Reserve Bank of India’s NDS- Order Matching system a significant proportion of the government securities market is trading on the new system. The yields and liquidity on various securities as of February 14, 2020 are as under:

Hedging Policies in connection with Trading in Derivatives

SEBI vide its circular no. MFD/CIR/011/06/2000 dated February 1, 2000 has permitted all the mutual funds to participate in the derivatives trading subject to observance of guidelines issued by SEBI in this behalf. Pursuant to this, the mutual funds may use various derivative and hedging products from time to time, as would be available and permitted by SEBI, in an attempt to protect the value of the portfolio and enhance Unit holders’ interest.

Pursuant to SEBI Circular no. MFD/CIR/21/25647/2002 dated December 31, 2002, MFD/CIR No. 03/158/03 dated June 10, 2003, CIR No. 4/2627/2004 dated February 6, 2004, DNPD/CR-30/2006 dated January 20, 2006, SEBI Circular/IMD/DF/11/2010 dated August 18,2010 and such other circular issued by SEBI from time to time in this regard, the Fund may use derivative instruments like Interest Rate Swaps, Forward Rate Agreements, stock future or other derivative instruments for the purpose of hedging and portfolio balancing or for its efficient management.

Derivative instruments may take form of Interest rate swaps, Forward rate agreements and such other derivative instruments as may be available from time to time and appropriate for the portfolio.

The risks and returns ensuing from such investments are explained herein below:

Interest rate Swaps

An interest rate swap is an agreement whereby two parties agree to exchange periodic interest payments. The amount of interest payments exchanged is based on some predetermined principal, called notional principal amount. The amount each counter party pays to the other is the agreed upon periodic interest rate multiplied by the notional principal amount. The only amount that is exchanged between the parties are the interest payment, not the notional principal amount.

A Forward Rate Agreement, on the other hand, is an agreement between two counter parties to pay or to receive the difference between an agreed fixed rate (the FRA rate) and the interest rate prevailing on a stipulated future date based on a notional amount, for an agreed period.

In the most common type of swap one party agrees to pay the other party fixed interest payments at designated dates for the life of contract. The other party agrees to make interest rate payments that float with some index.

The interest rate benchmarks that are commonly used for floating rate in an interest rate swap are those on various money market instruments. In Indian markets the benchmark most commonly used is MIBOR.

Swaps can be unwound by either reversing the original swap entered into or doing by a reverse swap with cash flows matching the original swap.

Example: Interest Rate Swap (IRS)

- Suppose the Scheme has a portion of its portfolio in cash. The Fund Manager has a view that the interest rate scenario is soft and call rates are unlikely to spurt over the next three months. The fund manager would therefore prefer to receive a higher rate of return on his cash, which he is lending in the overnight call market. In other words he would like to move to a 91 Day fixed interest rate from overnight floating rate

- In the above example

  Say Notional Amount: Rs. 5 crores
  Benchmark: NSE MIBOR
  Tenor: 91 days
  Fixed Rate: 6.25% At the end of 91 days
  The Scheme Pays: compounded call rates for 91 days, which averages to say 5.90%
  The Scheme receives fixed rate at 6.25% for 91 days.
  At the end of 91 days the transaction will be settled as under:-
  Fund receive Fixed rate @ 6.25% for 91 days
  Rs. 7,79,110
  Fund pays floating rate @ 5.90% for 91 days amounting to
  Rs. 7,35,479
  Net Receivable/Settlement Value Rs. 43,631

The Scheme may use derivative instruments primarily to protect the value of portfolio against potential risks such as interest rate risk, credit risks, reinvestment risk and liquidity risks. This protection is also known as hedge. At the same time, however, a properly correlated hedge will result in a gain in the portfolio position being offset by a loss in the hedge position. As a result, the use of derivatives could limit any potential gain from an increase in value of the position hedged. In addition, an exposure to derivatives in excess of the hedging requirement can lead to losses. IRS and FRAs do also have inherent credit and settlement risks. However, these risks are substantially reduced as they are limited to the interest streams and not the notional principal amounts.

Derivative instruments offer unique advantages like security exposures without the attendant execution and settlement risk. Derivative instruments carry a high risk return ratio. It is like a insurance policy where one has to pay the premium up-front and the benefit is contingent upon an event. Derivative instruments if used on a leveraged basis could distort the risk return ratio considerably even with a small price movement (the scheme will not take a leveraged exposure). It requires a high level of knowledge, understanding and surveillance to control risk.

The Scheme, however, will use the derivative instruments very judiciously and keep in mind the overall objective the scheme.

The Trustees shall offer their comments on the above aspects in the report filed with SEBI under sub regulation (23) (a) of regulation 18 of Securities and Exchange Board of India (Mutual Funds) Regulations, 1996.

Risk Control

Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process.
The risk control process involves reducing risks through portfolio diversification, taking care however not to dilute returns in the process. The AMC believes that this diversification would help achieve the desired level of consistency in returns. Stock specific risk will be minimized by investing only in those companies that have been analyzed by the Investment Team at the AMC. For investments in debt securities, the AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, rigorous and in-depth credit evaluation of the securities proposed to be invested in, will be carried out by the investment team of the AMC. Rated Debt instruments in which the Scheme invests will be of investment grade as rated by a credit rating agency. The AMC will be guided but not limited by the ratings of Rating Agencies such as CRISIL, CARE, ICRA and Fitch or any other rating agencies that may be registered with SEBI from time to time. In case a debt instrument is not rated, investment will be in accordance with Guidelines approved by the Board. Further, all investments in the unrated paper are periodically reviewed by Investment Committee and the Board of AMC & Trustee Company.

The Scheme may also use various derivatives and hedging products from time to time, as would be available and permitted by SEBI, in an attempt to protect the value of the portfolio and enhance Unitholders’ interest.

Portfolio Turnover

The Scheme is an open-ended scheme. It is expected that there would be a number of subscriptions and redemptions on a daily basis. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio.

Investments by the AMC in the Scheme

The AMC may invest in the Scheme, subject to the Regulations and to the extent permitted by its Board from time to time. As per the existing Regulations, the AMC will not charge investment management and advisory fee on the investment made by it in the Scheme.

F. FUNDAMENTAL ATTRIBUTES

b. the Unit holders are given an option for a period of 30 days to exit at the prevailing NAV without any exit load.

G. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

The Benchmark for the Scheme is CRISIL Money Market Fund Index.

The Scheme intends to invest in a portfolio of money market instruments which is best captured in CRISIL Money Market Fund Index and the AMC believes that this is a realistic estimate to track the returns of the fund at a particular risk level and hence it is considered to be an appropriate benchmark for the Scheme.

The Trustee/AMC reserves the right to change the benchmark for evaluating the performance of the Scheme from time to time, in conformity with the investment objective of the Scheme and the appropriateness of the benchmark, subject to SEBI guidelines and other prevalent guidelines.

The AMC may, under the below mentioned circumstances, impose restriction on redemption (including switch-outs) for a period not exceeding 10 working days in any 90 days period. Such restriction may be imposed when there are circumstances leading to a systemic crisis or event that severely constricts market liquidity or the efficient functioning of markets such as:

- Liquidity issues - When market at large becomes illiquid affecting almost all securities rather than any issuer specific security;
- Market failures, exchange closures - When markets are affected by unexpected events which impact the functioning of exchanges or the regular course of transactions. Such unexpected events could also be related to political, economic, military, monetary or other emergencies;
- Operational issues - When exceptional circumstances are caused by force majeure, unpredictable operational problems and technical failures (e.g. a black out).

In case the investor has not selected schemes for equity and debt allocation, the allocation shall be made to the default schemes. Also, if the investor has selected one scheme under debt or equity but not selected the other scheme under the 2nd category then the allocation in the 2nd category would be done to the default scheme.

(f) All investment for the Facility shall be mandatorily under Growth option only.

(g) Investor will have the option to choose a rebalancing period. The various rebalancing period options available are 1 year, 3 years, 5 years and 7 years. (i) The asset allocation shall be applicable to investor(s) from the age of 30 years onwards. If investor has opted for the Facility before the age of 30 years, the investments shall be fully allocated to equity allocation scheme. In case of investor investing at the age of 30 years and above or in case of additional investments/ SIP instalments, investor will get the asset allocation according to his/her age.

(n) The Investor may at any time completely switch the allocation from one eligible scheme to another eligible scheme within the same category i.e. equity allocation or debt allocation. SCHEME INFORMATION DOCUMENT – PGIM INDIA MONEY MARKET FUND 49
The purpose of the above table is to assist the investor in understanding the various costs & expenses that an investor in the Scheme will bear directly or indirectly. The above estimates have been made in good faith as per the information available to the AMC, and are subject to change inter-se, or in total, on account of any change in SEBI Regulations or otherwise. The actual expenses incurred may be lower than the estimated rates mentioned above. The AMC will strive to reduce the level of these expenses so as to keep them well within the maximum limit allowed by SEBI. All types of expenses charged to the Scheme shall be in accordance with the SEBI (MF) Regulations.

Illustration of impact of expense ratio on scheme’s returns

If the investor has invested Rs. 10,000 on April 30, 2018 under Regular Plan of the Scheme and value of his investment is Rs. 11,000 on April 30, 2019, his return on investment is 10% p.a. which is net of expense ratio @ 2% p.a. His return on investment before charging expense @ 2% p.a. would be Rs. 11,200 i.e. 12% p.a.

The present illustration is calculated pursuant to the requirements of SEBI Circular No. SEBI/HO/IMD/DF2/CIR/P/2016/42 dated March 18, 2016. The purpose of an illustration is to purely explain the impact of expense ratio charged to the Scheme and should not be construed as providing any kind of investment advice or guarantee of returns on investments. Actual returns on your investment may be more, or less. The expenses of the Direct Plan under the Scheme will be lower to the extent of distribution expenses/ commission. The NAVs published by the AMC are net of scheme expenses and they reflects return on investment to investors, provided investment is not subject to exit load. Any tax impact has not been considered in the above example, in view of the individual nature of the tax implications. Each investor is advised to consult his or her own financial advisor.
